Conceptual Category: Algebra (Modeling Standards denoted with an *)			
Algebra 1	Geometry	Algebra 2	Plus Standards
<p><b><i>Seeing Structure in Expressions</i></b>  <b><u>Interpret the structure of expressions (linear, exponential, quadratic)</u></b>                      *A.SSE.1: Interpret expressions that represent a quantity in terms of its context.</p> <ol style="list-style-type: none"> <li>a. Interpret parts of an expression, such as terms, factors, and coefficients.</li> <li>b. Interpret complicated expressions by viewing one or more of their parts as a single entity. <i>For example, interpret <math>P(1+r)n</math> as the product of <math>P</math> and a factor not depending on <math>P</math>.</i></li> </ol> <p><b><u>Write expressions in equivalent forms to solve problems (Quadratic and Exponential)</u></b>                      *A.SSE.3: Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.</p> <ol style="list-style-type: none"> <li>a. Factor a quadratic expression</li> </ol>		<p><b><i>Seeing Structure in Expressions</i></b>  <b><u>Interpret the structure of expressions (Polynomial and Rational)</u></b>                      *A.SSE.1: Interpret expressions that represent a quantity in terms of its context.</p> <ol style="list-style-type: none"> <li>a. Interpret parts of an expression, such as terms, factors, and coefficients.</li> <li>b. Interpret complicated expressions by viewing one or more of their parts as a single entity. <i>For example, interpret <math>P(1+r)n</math> as the product of <math>P</math> and a factor not depending on <math>P</math>.</i></li> </ol> <p>A.SSE.2: Use the structure of an expression to identify ways to rewrite it. <i>For example, see <math>x^4 - y^4</math> as <math>(x^2)^2 - (y^2)^2</math>, thus recognizing it as a difference of squares that can be factored as <math>(x^2 - y^2)(x^2 + y^2)</math>.</i></p> <p><b><u>Write expressions in equivalent forms to solve problems</u></b>                      *A.SSE.4: Derive the formula for the</p>	

<p>to reveal the zeros of the function it defines.</p> <p>b. Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.</p> <p>c. Use the properties of exponents to transform expressions for exponential functions. <i>For example the expression <math>1.15^t</math> can be rewritten as <math>(1.15^{1/12})^{12t} \approx 1.012^{12t}</math> to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.</i></p> <p><b>Arithmetic with Polynomial and Rational Expressions</b>  <u>Perform arithmetic operations on polynomials (Linear and quadratic)</u>  A.APR.1: Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.</p>		<p>sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. <i>For example, calculate mortgage payments.</i></p> <p><b>Arithmetic with Polynomial and Rational Expressions</b>  <u>Perform arithmetic operations on polynomials (beyond quadratic)</u>  A.APR.1: Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.</p>	
---	--	--	--

		<p>A.APR.2: Know and apply the Remainder Theorem: For a polynomial <math>p(x)</math> and a number <math>a</math>, the remainder on division by <math>x - a</math> is <math>p(a)</math>, so <math>p(a) = 0</math> if and only if <math>(x - a)</math> is a factor of <math>p(x)</math>.</p> <p>A.APR.3: Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial.</p> <p>A.APR.4: Prove polynomial identities and use them to describe numerical relationships. <i>For example, the polynomial identity <math>(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2</math> can be used to generate Pythagorean triples.</i></p> <p>A.APR.6: Rewrite simple rational expressions in different forms; write <math>\frac{a(x)}{b(x)}</math> in the form <math>q(x) + \frac{r(x)}{b(x)}</math>, where <math>a(x)</math>, <math>b(x)</math>, <math>q(x)</math>, and <math>r(x)</math> are polynomials with the degree of <math>r(x)</math> less than the degree of <math>b(x)</math>, using inspection, long division, or, for the more complicated examples, a computer algebra system.</p>	
--	--	--	--

<p><b>Creating Equations</b>  <u>Create equations that describe numbers or relationships (<i>linear, quadratic and exponential for integer inputs</i>)</u>                  *A.CED.1: Create equations and inequalities in one variable and use them to solve problems.                   *A.CED.2: Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes</p>		<p><b>(+) standards</b>                  A.APR.5: Know and apply the Binomial Theorem for the expansion of <math>(x + y)^n</math> in powers of <math>x</math> and <math>y</math> for a positive integer <math>n</math>, where <math>x</math> and <math>y</math> are any numbers, with coefficients determined for example by Pascal's Triangle.                   A.APR.7: Understand that rational expressions form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero rational expression; add, subtract, multiply, and divide rational expressions.</p> <p><b>Creating Equations</b>  <u>Create equations that describe numbers or relationships (<i>Equations using all available types of expressions, including simple root functions</i>)</u>                  *A.CED.1: Create equations and inequalities in one variable and use them to solve problems.                   *A.CED.2: Create equations in two or more variables to represent relationships between quantities;</p>	
---	--	---	--

<p>with labels and scales.</p> <p>*A.CED.3: Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or nonviable options in a modeling context. <i>For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.</i></p> <p>*A.CED.4: Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. <i>For example, rearrange Ohm's law <math>V = IR</math> to highlight resistance <math>R</math>.</i></p> <p><b>Reasoning with Equations and Inequalities</b></p> <p><b><u>Understand solving equations as a process of reasoning and explain the reasoning (Master linear, learn as general principle)</u></b></p> <p>A.REI.1: Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation</p>		<p>graph equations on coordinate axes with labels and scales.</p> <p>*A.CED.3: Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or nonviable options in a modeling context. <i>For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.</i></p> <p><b>Reasoning with Equations and Inequalities</b></p> <p><b><u>Understand solving equations as a process of reasoning and explain the reasoning (simple radical and rational)</u></b></p> <p>A.REI.2: Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.</p> <p><b><u>Solve equations and inequalities in one variable</u></b></p>	<p><b>Reasoning with Equations and Inequalities</b></p> <p><b><u>Solve systems of equations</u></b></p> <p>A.REI.8: Represent a system of linear equations as a single matrix equation in a vector variable.</p> <p>A.REI.9: Find the inverse of a matrix if it exists and use it to solve systems of linear equations (using technology for matrices of dimension <math>3 \times 3</math> or greater).</p>
--	--	---	---

<p>has a solution. Construct a viable argument to justify a solution method.</p> <p><b><u>Solve equations and inequalities in one variable</u> (<i>Linear inequalities; literal that are linear in the variables being solved for; quadratics with real solutions</i>)</b></p> <p>A.REI.3: Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters.</p> <p>A.REI.4: Solve quadratic equations in one variable.</p> <p>a. a. Use the method of completing the square to transform any quadratic equation in <math>x</math> into an equation of the form <math>(x - p)^2 = q</math> that has the same solutions. Derive the quadratic formula from this form.</p> <p>b. Solve quadratic equations by inspection (e.g., for <math>x^2 = 49</math>), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to</p>		<p>A.REI.4: Solve quadratic equations in one variable.</p> <p>b. Solve quadratic equations by inspection (e.g., for <math>x^2 = 49</math>), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as <math>a \pm bi</math> for real numbers <math>a</math> and <math>b</math>.</p> <p><b><u>Represent and solve equations and inequalities graphically</u> (<i>Combine polynomial, rational, radical, absolute value, and exponential functions</i>)</b></p> <p>A.REI.7: Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line <math>y = -3x</math> and the circle <math>x^2 + y^2 = 3</math>.</p> <p>*A.REI.11: Explain why the <math>x</math>-coordinates of the points where the graphs of the equations <math>y = f(x)</math> and <math>y = g(x)</math> intersect are solutions to the equation <math>f(x) = g(x)</math>.</p>	
---	--	---	--

<p>the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as <math>a \pm bi</math> for real numbers <math>a</math> and <math>b</math>.</p> <p><b><u>Solve systems of equations (Linear-linear and linear-quadratic)</u></b></p> <p>A.REI.5: Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.</p> <p>A.REI.6: Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.</p> <p>A.REI.7: Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line <math>y = -3x</math> and the circle <math>x^2 + y^2 = 3</math>.</p> <p><b><u>Represent and solve equations and inequalities graphically (Linear and</u></b></p>		<p><math>= g(x)</math> intersect are the solutions of the equation <math>f(x) = g(x)</math>; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where <math>f(x)</math> and/or <math>g(x)</math> are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.</p> <p>A.REI.12: Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.</p>	
--	--	---	--

<p><b><i>exponential; learn as general principle</i></b></p> <p>A.REI.10: Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).</p> <p>*A.REI.11: Explain why the <math>x</math>-coordinates of the points where the graphs of the equations <math>y = f(x)</math> and <math>y = g(x)</math> intersect are the solutions of the equation <math>f(x) = g(x)</math>; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where <math>f(x)</math> and/or <math>g(x)</math> are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.</p> <p>A.REI.12: Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.</p>

Conceptual Category: Functions (Modeling Standards denoted with an *)			
Algebra 1	Geometry	Algebra 2	Plus Standards
<p><b>Interpreting Functions</b>  <u>Understand the concept of a function and use function notation</u>  <i>(learn as a general principle; focus on linear and exponential and arithmetic and geometric sequences)</i></p> <p>F.IF.1: Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If <math>f</math> is a function and <math>x</math> is an element of its domain, then <math>f(x)</math> denotes the output of <math>f</math> corresponding to the input <math>x</math>. The graph of <math>f</math> is the graph of the equation <math>y = f(x)</math>.</p> <p>F.IF.2: Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.</p> <p>F.IF.3: Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. <i>For example, the Fibonacci sequence is defined recursively by <math>f(0) = f(1) = 1</math>, <math>f(n+1) = f(n) + f(n-1)</math> for <math>n \geq 1</math>.</i></p>		<p><b>Interpreting Functions</b>  <u>Interpret functions that arise in application in terms of the context</u>  <i>(Emphasize selection of appropriate models)</i></p> <p>*F.IF.4: For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. <i>Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.</i></p> <p>*F.IF.5: Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. <i>For example, if the function <math>h(n)</math> gives the number of person-hours it takes to assemble <math>n</math> engines in a factory, then the positive integers would be an appropriate domain for the function.</i></p> <p><b>Analyze functions using different</b></p>	

<p><b><u>Interpret functions that arise in application in terms of the context (Linear, exponential and quadratic)</u></b></p> <p>*F.IF.4: For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. <i>Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.</i></p> <p>*F.IF.5: Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. <i>For example, if the function <math>h(n)</math> gives the number of person-hours it takes to assemble <math>n</math> engines in a factory, then the positive integers would be an appropriate domain for the function.</i></p> <p>*F.IF.6: Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph.</p> <p><b><u>Analyze functions using different representations (Linear, exponential, quadratic, absolute value, piecewise</u></b></p>		<p><b><u>representations (Focus on using key features to guide selection of appropriate type of model function)</u></b></p> <p>*F.IF.7: Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.</p> <ul style="list-style-type: none"> <li>b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.</li> <li>c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior.</li> <li>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.</li> </ul> <p>F.IF.8: Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.</p> <p>F.IF.9: Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). <i>For example, given a graph of one quadratic</i></p>	
---	--	--	--

<p><b>defined)</b>          *F.IF.7: Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.</p> <ol style="list-style-type: none"> <li>a. Graph linear and quadratic functions and show intercepts, maxima, and minima.</li> <li>b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions.</li> <li>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude.</li> </ol> <p>F.IF.8: Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.</p> <ol style="list-style-type: none"> <li>a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.</li> <li>b. Use the properties of exponents to interpret expressions for exponential</li> </ol>		<p><i>function and an algebraic expression for another, say which has the larger maximum.</i></p> <p><b>(+ standards)</b>          *F.IF.7: Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.</p> <ol style="list-style-type: none"> <li>d. Graph rational functions, identifying zeros and asymptotes when suitable factorizations are available, and showing end behavior.</li> </ol>	
---	--	---	--

<p>functions. For example, identify percent rate of change in functions such as <math>y = (1.02)^t</math>, <math>y = (0.97)^t</math>, <math>y = (1.01)12^t</math>, <math>y = (1.2)^t/10</math>, and classify them as representing exponential growth or decay.</p> <p>F.IF.9: Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). <i>For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.</i></p> <p><b>Building Functions</b>  <u>Build a functions that models a relationship between two quantities (linear, exponential and quadratic)</u>          *F.BF.1: Write a function that describes a relationship between two quantities.</p> <ol style="list-style-type: none"> <li>Determine an explicit expression, a recursive process, or steps for calculation from a context.</li> <li>Combine standard function types using arithmetic operations. <i>For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying</i></li> </ol>		<p><b>Building Functions</b>  <u>Build a functions that models a relationship between two quantities (include all functions studied)</u>          *F.BF.1: Write a function that describes a relationship between two quantities.</p> <ol style="list-style-type: none"> <li>Combine standard function types using arithmetic operations. <i>For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.</i></li> </ol> <p><b>Build new functions from existing</b></p>	<p><b>Building Functions</b>  <u>Build a functions that models a relationship between two quantities</u>          *F.BF.1: Write a function that describes a relationship between two quantities.</p> <ol style="list-style-type: none"> <li>Compose functions. <i>For example, if <math>T(y)</math> is the temperature in the atmosphere as a function of height, and <math>h(t)</math> is the height of a weather balloon as a function of time, then <math>T(h(t))</math> is the temperature at the location of the weather balloon as a function of time.</i></li> </ol>
---	--	---	--

<p><i>exponential, and relate these functions to the model.</i></p> <p>*F.BF.2: Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms.</p> <p><b><u>Build new functions from existing functions (Linear, exponential, quadratic and absolute value)</u></b></p> <p>F.BF.3: Identify the effect on the graph of replacing <math>f(x)</math> by <math>f(x) + k</math>, <math>k f(x)</math>, <math>f(kx)</math>, and <math>f(x + k)</math> for specific values of <math>k</math> (both positive and negative); find the value of <math>k</math> given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. Include recognizing even and odd functions from their graphs and algebraic expressions for them.</p>		<p><b><u>functions (include simple radical, rational, and exponential functions; emphasize common effect of each transformation across function types)</u></b></p> <p>F.BF.3: Identify the effect on the graph of replacing <math>f(x)</math> by <math>f(x) + k</math>, <math>k f(x)</math>, <math>f(kx)</math>, and <math>f(x + k)</math> for specific values of <math>k</math> (both positive and negative); find the value of <math>k</math> given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. <p><b>Interpreting Categorical and Quantitative Data</b>  <u>Summarize, represent, and interpret data on a single count or measurement variable</u>                      S.ID.1: Represent data with plots on the real number line (dot plots, histograms, and box plots).</p> <p>S.ID.2: Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.</p> <p>S.ID.3: Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).</p> <p><u>Summarize, represent, and interpret data on two categorical and quantitative variables</u>  <i>(Linear focus, discuss general principle)</i>                      S.ID.5: Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data</p>	<p><b>Conditional Probability and the Rules of Probability</b>  <u>Understand independence and conditional probability and use them to interpret data</u>  <i>(Link to data from simulations and experiments)</i>                      S.CP.1: Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not").</p> <p>S.CP.2: Understand that two events <math>A</math> and <math>B</math> are independent if the probability of <math>A</math> and <math>B</math> occurring together is the product of their probabilities, and use this characterization to determine if they are independent.</p> <p>S.CP.3: Understand the conditional probability of <math>A</math> given <math>B</math> as <math>P(A \text{ and } B)/P(B)</math>, and interpret independence of <math>A</math> and <math>B</math> as saying that the conditional probability of <math>A</math> given <math>B</math> is the same as the probability of <math>A</math>, and the conditional probability of <math>B</math> given <math>A</math> is the same as the probability of <math>B</math>.</p>	<p><b>Interpreting Categorical and Quantitative Data</b>  <u>Summarize, represent, and interpret data on a single count or measurement variable</u>                      S.ID.4: Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve.</p> <p><b>Making Inferences and Justifying Conclusions</b>  <u>Understand and evaluate random processes underlying statistical experiments</u>                      S.IC.1: Understand statistics as a process for making inferences about population parameters based on a random sample from that population.</p> <p>S.IC.2: Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. <i>For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of</i></p>	<p><b>Conditional Probability and the Rules of Probability</b>  <u>Use the rules of probability to compute probabilities of compound events in a uniform probability model</u>                      S.CP.8: Apply the general Multiplication Rule in a uniform probability model, <math>P(A \text{ and } B) = P(A)P(B A) = P(B)P(A B)</math>, and interpret the answer in terms of the model.</p> <p>S.CP.9: Use permutations and combinations to compute probabilities of compound events and solve problems.</p> <p><b>Using Probability to Make Decisions</b>  <u>Calculate expected values and use them to solve problems</u>                      S.MD.1: Define a random variable for a quantity of interest by assigning a numerical value to each event in a sample space; graph the corresponding probability distribution using the same graphical displays as for data distributions.</p> <p>S.MD.2: Calculate the expected value of a random variable; interpret it as</p>

<p>(including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data.</p> <p>S.ID.6: Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.</p> <ol style="list-style-type: none"> <li>Fit a function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.</li> <li>Informally assess the fit of a function by plotting and analyzing residuals.</li> <li>Fit a linear function for a scatter plot that suggests a linear association.</li> </ol> <p><b><u>Interpret linear models</u></b></p> <p>S.ID.7: Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data.</p> <p>S.ID.8: Compute (using technology) and interpret the correlation coefficient of a linear fit.</p> <p>S.ID.9: Distinguish between</p>	<p>S.CP.4: Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. <i>For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results.</i></p> <p>S.CP.5: Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations. <i>For example, compare the chance of having lung cancer if you are a smoker with the chance of being a smoker if you have lung cancer.</i></p> <p><b><u>Use the rules of probability to compute probabilities of compound events in a uniform probability model</u></b></p> <p>S.CP.6: Find the conditional probability of <math>A</math> given <math>B</math> as the fraction of <math>B</math>'s outcomes that also belong to <math>A</math>, and interpret the answer in terms of the model.</p>	<p><i>5 tails in a row cause you to question the model?</i></p> <p><b><u>Make inferences and justify conclusions from sample surveys, experiments, and observational studies</u></b></p> <p>S.IC.3: Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each.</p> <p>S.IC.4: Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling.</p> <p>S.IC.5: Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant.</p> <p>S.IC.6: Evaluate reports based on data.</p>	<p>the mean of the probability distribution.</p> <p>S.MD.3: Develop a probability distribution for a random variable defined for a sample space in which theoretical probabilities can be calculated; find the expected value. <i>For example, find the theoretical probability distribution for the number of correct answers obtained by guessing on all five questions of a multiple-choice test where each question has four choices, and find the expected grade under various grading schemes.</i></p> <p>S.MD.4: Develop a probability distribution for a random variable defined for a sample space in which probabilities are assigned empirically; find the expected value. <i>For example, find a current data distribution on the number of TV sets per household in the United States, and calculate the expected number of sets per household. How many TV sets would you expect to find in 100 randomly selected households?</i></p> <p><b><u>Use probability to evaluate outcomes of decisions</u></b></p> <p>S.MD.5: Weigh the possible outcomes of a decision by assigning probabilities to payoff values and finding expected values.</p>
--	---	--	--

<p>correlation and causation.</p>	<p>S.CP.7: Apply the Addition Rule, <math>P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)</math>, and interpret the answer in terms of the model.</p>		<p>a. Find the expected payoff for a game of chance. <i>For example, find the expected winnings from a state lottery ticket or a game at a fast-food restaurant.</i></p> <p>b. Evaluate and compare strategies on the basis of expected values. <i>For example, compare a high-deductible versus a low-deductible automobile insurance policy using various, but reasonable, chances of having a minor or a major accident.</i></p> <p>S.MD.6: Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator).</p> <p>S.MD.7: Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).</p>
