

# English Language Arts/Literacy Focused Interim Assessment Blocks Blueprint

as of December 2020

The Smarter Balanced Focused Interim Assessment Blocks (FIABs) are one type of interim assessment being made available by the Consortium; the other types are the Interim Comprehensive Assessment (ICAs), which are similar in structure and follow the same blueprint as the summative assessment, and the legacy IABs, which are snapshots of student performance on multiple targets within a claim. FIABs are short, focused sets or blocks of items that measure usually one or two assessment targets. Results from these focused assessment blocks provide information about a student's strengths or needs in relation to the Common Core State Standards (CCSS) and, therefore, generate more detailed information for instructional purposes than the summative or ICAs can alone. All types of interim assessments are currently available as fixed forms. The fixed forms are administered online, using the same delivery software as the summative assessments.

This blueprint presents the specific focused interim blocks that are available by grade level for English Language Arts/literacy beginning at Grade 3 and continuing through high school. Each block-level blueprint contains information about claim(s), assessment target(s), and depth of knowledge (DOK) level(s) addressed by the items in that block as well as the numbers of items allocated to each of those categories. Other more subject-specific information is also included. For example, this blueprint incorporates details on passage length (claim 1 reading) and scoring of responses.

The blueprint can be used by educators to plan how to integrate IABs and FIABs effectively within classroom instruction or to better understand results that are reported. Users of the blueprint can become familiar with the number of IABs/FIABs for each grade level, the general focus of each, (i.e., which assessment targets are addressed in a specific IAB or FIAB and the emphasis of each target relative to the other targets in the block). A fifth-grade English Language Arts/literacy teacher, for example, may wish to determine what practice students need in writing informational texts. The teacher would see that there is an IAB block on revising texts composed of fifteen machine-scored items across three assessment targets—revising narrative, informational, and opinion texts—and an FIAB block that focuses just on Writing and Revising Informational Text, which has a combination of machine-scored and short answer items. A third option would be to administer a performance task that deals solely with research and informational writing that is also hand scored. Given the differences in class time required and the amount of time needed to score blocks, the teacher would decide which blocks best meet the instructional needs of the class.

Finally, educators can use these FIAB as well as the IAB blueprints in conjunction with the summative and ICA blueprints to support more comprehensive classroom-level instructional and assessment plans.
