

PREPARING STUDENTS FOR SUCCESS IN GRADE 4

Your Child's Progress

A parent resource for understanding what your child should learn and be able to do this year, and helpful suggestions for supporting your child's learning at home.

We owe it to our kids to make sure that they receive an education that prepares them to thrive in a global economy and civic life. That is why Connecticut raised the bar and issued an instructional roadmap that will prepare our kids for college and careers.

Our roadmap, the Connecticut Core Standards, sets learning expectations for what students should learn and be able to do at each grade level so that by the time they graduate from high school, they are ready to succeed in college and the workplace. These standards help set clear and consistent expectations for everyone involved in your child's learning.

A ruler for measuring student success

The Smarter Balanced assessments measure student progress based on the standards, or learning expectations, for Grades 3-8 in English language arts and mathematics. The scores can be used as a ruler to measure the skills your child acquired throughout the school year. The tests provide information about achievement in the current grade and growth from one grade to the next.

Building a bridge between school and home

At home, you can play an important role in setting high expectations and supporting your child in meeting them. If your child needs a little extra help or wants to learn more about a subject, work with his or her teacher to identify tutoring opportunities, to get involved in clubs after school, or to find other resources. Talk to your child's teacher regularly about how your child is doing beyond the parent-teacher conferences. By building a connection between home and school, you can greatly improve the impact of your child's learning.

What Your Child Learned in Grade 3

Mathematics

- Engaging in activities that involve finding an unknown product (multiplication) and finding an unknown factor (division) to develop an understanding of multiplication and division of whole numbers.
- Knowing the single-digit multiplication and division facts up to 100.
- Developing strategies for solving multiplication and division problems with whole numbers up to 100.
- Developing an understanding of fractions, especially unit fractions (fractions with a numerator or top number of 1). Using fractions to represent numbers equal to, less than, and greater than 1, especially on a number line.
- Describing, analyzing, and comparing the angles and number of sides of two-dimensional shapes.
- Understanding the concept of the area of a shape and relating area to multiplication by finding the number of same size units required to cover the shape without gaps or overlaps.

English Language Arts

- Reading closely and carefully to find main ideas and supporting details in a story.
- Comparing important points and details in two texts on the same topic.
- Comparing ideas, characters, events, and settings in stories and myths.
- Asking and answering questions about what they read by referring directly to parts of the text.
- Reading stories and poems aloud fluently, without pausing to figure out what each word means.
- Planning, revising, and editing writing using resources and support from peers and teachers.
- Writing stories with dialogue and descriptions of characters' actions, thoughts, and feelings.
- Conducting short research projects that build knowledge about various topics.
- Gathering information from books, articles, and online sources to build an understanding of a topic.
- Participating in discussions by listening, asking questions, sharing ideas, and building on the ideas of others.

Please note: Text is printed materials (books, newspapers, magazines) as well as graphics, drawings, and multimedia such as audio or visual recordings.

What Your Child Will Learn in Grade 4

Mathematics

- Adding and subtracting whole numbers within 1,000,000 quickly and accurately.
- Developing an understanding of and building fluency with multidigit multiplication and division (Example: $36 \times 15 = 30 \times 15 + 6 \times 15$; and $20 \times 15 + 10 \times 15 + 6 \times 15 = 36 \times 15$).
- Solving multistep problems involving addition, subtraction, multiplication, division, and explaining why the answer makes sense.
- Adding and subtracting fractions with the same denominator (Example: $5/8 = 1/8 + 1/8 + 1/8 + 1/8$).
- Extending the understanding of fractions by comparing the size of two fractions with different numerators (top numbers) and different denominators (bottom numbers).
- Developing an understanding of equivalent fractions by using pictures, number lines, and fraction models (Example: $1/2$ is the same as $3/6$ and the same as $5/10$).
- Converting fractions with denominators of 10 or 100 into decimals and locating decimals on a number line.
- Connecting addition and subtraction of whole numbers to multiplying fractions by whole numbers.

English Language Arts

- Identifying the purpose of a story, drama, or poem.
- Identifying the main idea of a historical, scientific, or technical text.
- Summarizing the main topic of a text using the key supporting details.
- Comparing characters, events, settings, themes, or points of view in stories and myths.
- Explaining how an author uses facts, details, and evidence to support their points.
- Writing on a topic using facts, details, definitions, quotations, or other information.
- Writing a story with an event sequence that unfolds naturally, using dialogue, description, and sensory details, and providing a conclusion.
- Writing complete sentences with correct capitalization and spelling.
- Conducting short research projects using evidence from books and other sources.
- Participating in discussions by listening, asking questions, sharing ideas, and building on the ideas of others.

Please note: Text is printed materials (books, newspapers, magazines) as well as graphics, drawings, and multimedia such as audio or visual recordings.

How You Can Help Your Child

Mathematics

- Encourage your child to use what is already known to find answers for new problems (Example: $4,500 - 399 = ?$ Think: $4,000 + (500 - 399) = 4,000 + 101 = 4,101$).
- Ask your child to explain what they are doing when working on a problem. Be patient with unfamiliar methods because they might be helpful to support your child's understanding of mathematics.
- Encourage your child to stick with a problem that may seem difficult at first, working on different ways to solve a problem can be helpful.
- Play math games with your child and ask for explanations of their strategies and solutions.
- Use everyday activities such as cooking and measuring to show your child how fractions are used.

English Language Arts

- Use technology to read fiction and non-fiction books and stories. Many online books for children have interactive features and are available from your local library.
- Ask questions that require your child to use details from the book.
- Encourage your child to use print or online materials such as a dictionary, thesaurus, or glossary to find the meaning of unknown words or phrases and to look for word meaning within the text.
- Read aloud with your child. Become a character from a story and read aloud from the text with expression.
- Read or watch different versions of a traditional story, such as Little Red Riding Hood or Cinderella, and compare events, characters, purpose, and points of view. Discuss the effect the changes have on the story.
- Talk about the daily news. Pick one news event to read and then watch a news clip on the same topic. Compare the facts, details, and points of view of the news story.
- Provide your child with exposure to typing on a keyboard (using a home or library computer).
- Play hot potato with synonyms and antonyms. Choose a word, and then have your child think of another word that means the same thing. Take turns until someone is stumped. For example, you may say, "hot," and your child might say, "boiling." Then you could say, "scorching," and so on. Try the game again with antonyms.

Resources

Mathematics

Khan Academy

The [Khan Academy website](#) provides an extensive library of user-friendly content for K–12 mathematics. Students can practice at their own pace and use interactive challenges and videos from any computer with Internet access.

Be A Learning Hero

The [Be A Learning Hero website](#) supports families in guiding their children’s learning by providing resources, tools, and tips aligned to grade-level expectations. It helps parents understand their child’s progress in math and offers activities to build skills at home.

IXL

The [IXL website](#) offers comprehensive, standards-aligned practice in mathematics. Students receive personalized recommendations, immediate feedback, and interactive questions that adapt to their skill level.

Math Playground

The [Math Playground website](#) provides a variety of engaging math games, puzzles, and problem-solving activities for students. It encourages critical thinking and helps students build fluency through play and practice.

English Language Arts

Reading Rockets

The [Reading Rockets website](#) offers many resources and activities that can help your child become an engaged reader, including literacy adventure packs, themed booklists, author interviews, nonfiction resources, summer reading suggestions, and more.

jColorín Colorado!

The [jColorín Colorado! website](#) is a national multimedia project that offers a wealth of bilingual, research-based information, activities, and advice for educators and families of English learners/multilingual learners.

National PTA Parent Toolkit

The PTA's mission is to make every child’s potential a reality by engaging and empowering families and communities to advocate for all children, they offer the [National PTA Parent Toolkit website](#).
