Combining health carrier data would not have provided useful information for this data point. In addition, some of the health carriers have small membership which can result in skewed percentages year-over year. If one prescription of a particular drug is filled in 2019 and 10 are filled in 2020 this will show a significant percentage increase from 2019 to 2020 when reviewing year over year annual spend.

- 4. The portion of the premium for such health care plan that is attributable to each of the following categories of covered outpatient prescription drugs that were prescribed to insureds under such health care plan during such calendar year:**
