

CT Developmental Services Management Information Report (MIR) Attachment

The Management Information Report (MIR) provides DDS stakeholders and staff with information about eligibility, services and supports received by individuals, additional needs and new development activities, age distribution, waiver enrollment, and personnel management.

Notes for the September 2025 MIR:

Starting this quarter and moving forward, the MIR has a new design based on extensive stakeholder feedback which required changes to the report layout and the logic used to process data. DDS notes all these changes in this attachment.

All sections of the MIR have new captions describing the content being reported. In many instances, section titles are revised and reorganized to also reflect the contents being reported and to improve consistency in language. **Subsections 2. Services and Supports, 1E. Projected Residential Ageouts and 2E. Projected High School Graduates and Day Ageouts** of the old MIR version are integrated into **Section 3. New Developments This Year to Date** under a new title, **Section 3. Ageouts and Graduates**. Additionally, **Section 4. Caseloads by Age** of the old MIR is integrated into **Section 1. Services and Supports**, which shifts the numbering of sections. Section 5 of the old MIR is now Section 4, and Section 6 of the old MIR is Section 5. **Subsections 1. Services and Supports, Active Individuals by Caseload Type and 5. Home and Community Based Wavers, B. Federal Revenue** of the old MIR have been removed entirely as their contents are outdated and no longer relevant or required for reporting. Changes to section titles and their order are listed below in the Appendix.

All data reported in the MIR is in new table layouts. Sections of the old MIR that contained multiple tables on one page have been consolidated, so there is now one table per page. This allows for easier comparison across regions that were previously reported on separate tables. However, in instances where a single table does not fit on the page, reported regions are split into two pages. Visualizations in **Subsection 1. Services and Supports, D. Number of Individuals Who Self-Direct Residential Services** have also been consolidated and switched to a line graph – instead of the bar graphs previously used – to improve comparability across regions and over time.

Based on stakeholder feedback, **Subsection 1. Services and Supports, A. Residential Services and Where Individuals Live** has been revised to better describe the service placements reported. The categories for DCF, DMHAS, DOC, Not DDS Funded, and Blank are counted as having No DDS Res. Annual Funds in the new MIR instead of Private Provider supports. Furthermore, Intermediate Care Facility (ICF) services are reported as Private Provider supports instead of having their own separate column. Non-Standard Residential services that were previously reported in the Residential School category are now reported in the Other category.

Sections pertaining to Employment and Day Services (EDS) have the most substantial revisions to the content being reported, in particular **Subsections 1. Services and Supports, D. Employment and Day Services (EDS) and E. Employment and Day Service (EDS) Trends Over Time** of the new MIR. Many individuals who receive EDS have more than one type of support. The old MIR uses primary day placements to count individuals once by their primary support type only. The new MIR uses a ranking system instead that prioritizes employment-based supports to count individuals in their employment support placement, especially supports that are provided in an individual or community-based setting. As a result, individuals with more than one type of EDS are counted as receiving employment supports if they have any type of employment-based support. New EDS categories have also been created to accommodate the ranking system. These categories are ranked as follows: 1. Individual Integrated Employment, 2. Group Integrated Employment, 3. Community Based Non-Work Services, 4. Facility Based Non-Work Services, 5. Educational and Developmental Services.

To aid in understanding the new groupings above the following descriptions were developed:

1. Individual Integrated Employment - Services that are provided in a community setting to a single participant and support or lead directly to their paid employment, such as job development and long-term services to support entering or maintaining competitive employment.
2. Group Integrated Employment - Services that occur in a community setting where continuous job-related supports and supervision are provided to a group of workers with disabilities.
3. Community Based Non-Work Services - Services that do not involve paid employment and focus on supporting people with disabilities to access community activities in settings where most people do not have disabilities.
4. Facility Based Non-Work Services - Services that do not involve paid employment and occur in a setting where the majority of participants have a disability.
5. Educational and Developmental Services - Services designed to support children with disabilities to achieve their educational goals and improve their overall development.

Sections that are not mentioned in this attachment do not have revisions that impacted the content.

Explanation of the Waiting and Planning Lists

Beginning in March 2017, case managers began working with individuals and their families through the annual Individual Planning (IP) process to collect information through the Support Survey and Residential Request Assessment. The Support Survey identifies whether or not an individual has unmet residential or day service needs. If the individual is determined to have unmet residential needs, the Residential Request Assessment identifies what type of service is needed. This process produced new information over the course of a year, so the data in Sections II(A) and II(B) are presented in an updated format that should be clearer and easier to understand.

Starting with the MIR from September 2017, residential needs data are listed using the updated categories. Priorities are reflected in the following categories:

	Category	Description
Waiting List	Emergency	The individual has an immediate need for residential placement, support or services
	Urgent	The individual is requesting placement within 1 year and has been determined to have the most pressing need for services
Planning List	Future Needs	The individual wants or will need services in two or more years

In addition, individuals on the Waiting and Planning Lists belong to one of these groups:

No Services	Individuals who do not receive any annualized funding for residential services.
Underserved	Individuals who currently receive residential services but need increased resources in their current placement or need to move to a new placement.

This data does not include individuals with residential needs that are aging out of residential settings or want to exchange a non-institutional residential service for another.

B. Abuse and Neglect Registry

This is an overview of notifications for suspected abuse and neglect recorded in the DDS Abuse and Neglect Registry for both public and private providers. Service providers are required to notify DDS when an employee is terminated due to abuse and neglect. These employees have the right to an administrative hearing which determines if their name is placed on the Registry. Prior to any new hiring, providers must inquiry whether the potential employee's name is on the Registry. If the potential employee's name is on the Registry, they can not be hired by any provider licensed or funded by DDS.
