

DNA WI-14 (Knowns from Personnel)

Document ID: 936

Revision: 1

Effective Date: 8/15/2014

Status: Published

Page 1 of 1

Approved by Director: Dr. Guy Vallaro

As part of FBI QAS standard 6 (Does the laboratory have a procedure for monitoring, cleaning and decontaminating facilities and equipment), individuals present at the time of DNA testing will provide a buccal swab (or other source) for DNA typing if their DNA profile is not already determined. All analysts in the DNA Section will determine their DNA profile for all systems employed by the laboratory during their training period. DNA analysts will be typed for new DNA typing systems prior to the method being implemented for casework. All non-laboratory personnel will provide a known sample prior to observing the DNA testing.
