

Approved by Director: Dr. Guy Vallaro

1. All cases **except** for Sexual Assault and Homicide cases will follow the stop at the quantification step procedure. Sexual Assaults follow the Male Screen Procedure (DNA SOP-34), and Homicide cases are not stopped at quant unless the work request is canceled.
2. Cases other than the above that do not have a suspect known submitted to the laboratory will be stopped at the quantification step if the amount detected is under **0.00067 ng/μL** in the small autosomal column on the trio quant report. This is equivalent to approximately 10pg total input DNA when using 15 μL of the genomic DNA for amplification.
3. The known samples for cases that qualify (as stated in #1) as a possible stop at quant case will be examined, put on the spreadsheet with the notation "examine -portion retained," and a portion retained at the laboratory for future testing. **Case Management will not be adding the knowns to the known spreadsheet.**
4. If a suspect known is at the lab, or the samples are moving forward since they are above the stop at quant value, that would be the time the known spreadsheet would be updated to have the sample(s) tested, and elimination knowns would also be processed.
5. All non-differential sets will have 1 Reagent Blank processed, which will be quanted with its respective set. Therefore, if an entire batch is stopped, the reagent blank will not have to be amplified and run with CE.
6. If a suspect's known sample comes in after the case was stopped, the extract will be amplified as appropriate.
7. If a sample quant result is "undetected" in all three columns on the Trio report, no further testing will be done.
8. Stopped samples will be noted and justified in the batch paperwork; please see DNA QR-48 Stop at Quant List.
9. Stopped samples will be reported following the language in DNA SOP-6 concerning the "stop at quant".
10. A remark on the report will be written to ask for any knowns from potential suspects or victims, as appropriate.

Approved by Director: Dr. Guy Vallaro

11. If all the samples in a case were stopped, the report will ask for elimination and suspect knowns since extract is available to be processed for elimination purposes only.
