---

Project 0158-0214 PAC Meeting Update

May 15, 2025

## March 15<sup>th</sup>, 2025 – Meeting Agenda

---

- Introduction of the Project Team
- History of the project
- Alternatives Evaluated
- Preferred Alternative
- Timeline / Where we are
- Questions

# CTDOT Project Team

Derick  
M. Lessard  
Division Chief of  
Bridges

Kevin F. Carifa  
Director

Bao K. Chuong  
Transportation  
Principal Engineer

Kevin Fleming  
Transportation  
Supervising  
Planner

James R.  
Barrows  
Transportation  
Supervising  
Engineer

Mandy Ranslow  
Transportation  
Supervising  
Planner

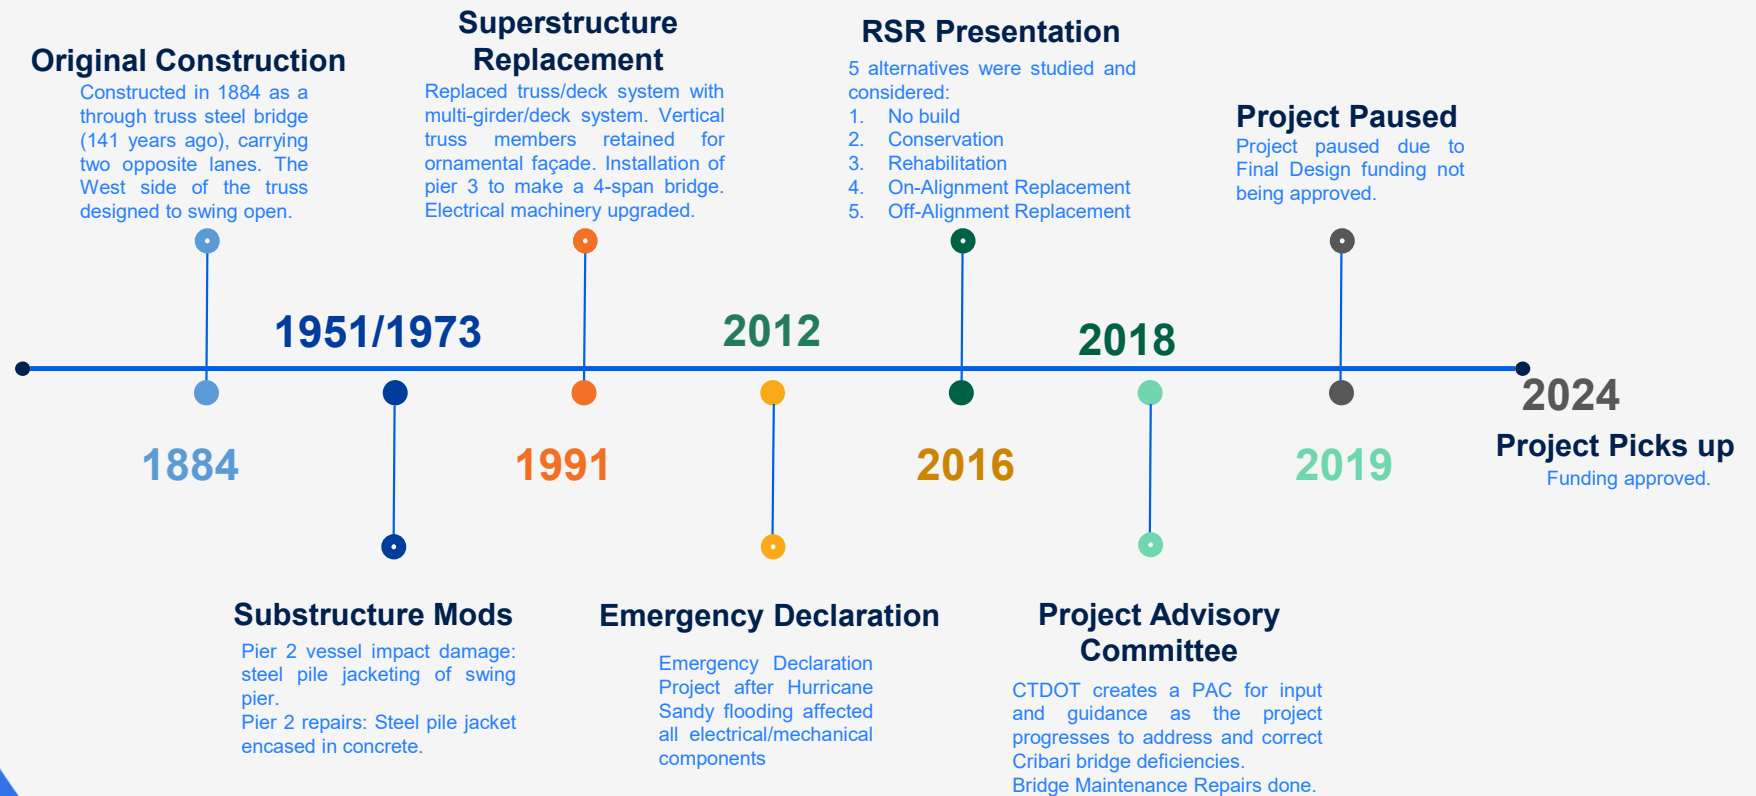

Ashley Heredia  
Transportation  
Engineer III

Heather L.  
Carpini-Prescott  
Transportation  
Planner II

# History of the Project

## Project Purpose and Need

---

The purpose & need of the project is to provide a structure that:

- Addresses the structural & functional deficiencies of existing
- Accommodates safe vehicular, bike, pedestrian & marine travel
- Is resilient to changing shoreline, climate, and environmental conditions
- Considers the historic character of the bridge

## No Build Alternative

---

### *Summary:*

The work involved includes **minor** repairs performed as required, by DOT Maintenance forces. Repairs are limited to DOT Maintenance capabilities.

### *Service Life:*

10-15 Years

### *Preliminary Cost:*

*Maintenance Cost as Required*

# Conservation Alternative

## *Summary:*

- Restore condition to immediately after 1991 rehabilitation project
- Repair of damaged elements
- Structural repair of Piers 2 and 3

## *Service Life:*

25-40 Years

## *Preliminary Cost:*

\$49,000,000 - \$54,000,000

# Rehabilitation Alternative

## *Summary:*

- Repair/widening of trusses
- Structural repair of Piers 2 and 3
- Install crash-tested bridge railing system
- Water-resistance mechanical equipment
- Roadway barrier for bridge openings
- Replace fender system

## *Service Life:*

25-40 Years

## *Preliminary Cost:*

\$50,000,000 - \$55,000,000

# On-Alignment Replacement Alternative

## *Summary:*

Replacement of the existing bridge with a new structure meeting minimum design standards on the same alignment as existing

## *Service Life:*

75-100 Years

## *Preliminary Cost:*

\$78,000,000 - \$86,000,000

# Off-Alignment Replacement Alternative

## *Summary:*

Replacement of the existing bridge with a new structure on an alignment located north from the existing, meets all standards as On-Alignment replacement

## *Service Life:*

75-100 Years

## *Preliminary Cost:*

\$66,000,000 - \$73,000,000

# Temporary Bridge

*Alternatives that will use a temporary bridge:*

- Conservation Alternative
- Rehabilitation Alternative
- On-Alignment Replacement

# Alternative Comparison

|  | <u>No Build</u> | <u>Conservation</u> | <u>Rehabilitation</u> | <u>Replacement<br/>(On-Alignment)</u> | <u>Replacement<br/>(Off-Alignment)</u> |
|--|-----------------|---------------------|-----------------------|---------------------------------------|--|
| <b>Purpose &amp; Need Element: Addresses the structural and functional deficiencies of the existing bridge</b> |                 |                     |                       |                                       |  |
| <b>Parameter:</b><br>Adequate vertical clearance   | NO              | NO                  | YES                   | YES                                   | YES                                    |
| <b>Parameter:</b><br>Adequate horizontal clearance   | NO              | NO                  | NO                    | YES                                   | YES                                    |
| <b>Parameter:</b><br>Meets standard load rating for bridges on State routes                                    | NO              | YES                 | YES                   | YES                                   | YES                                    |
| <b>Parameter:</b><br>"Fair" condition or better  | NO              | YES                 | YES                   | YES                                   | YES                                    |
| <b>Purpose &amp; Need Element: Accommodates safe vehicular, bicycle, pedestrian, and marine traffic</b>        |                 |                     |                       |                                       |  |
| <b>Parameter:</b><br>Safe bicycle travel (bike lane or shoulder)   | NO              | NO                  | NO                    | YES                                   | YES                                    |
| <b>Parameter:</b><br>ADA compliant sidewalk  | NO              | NO                  | NO                    | YES                                   | YES                                    |
| <b>Parameter:</b><br>Safe bridge guardrail system (MASH-compliant)   | NO              | NO                  | YES                   | YES                                   | YES                                    |
| <b>Parameter:</b><br>Solid roadway barrier system  | NO              | NO                  | YES                   | YES                                   | YES                                    |
| <b>Parameter:</b><br>Vertical clearance (increased in closed position to reduce openings)                      | NO              | NO                  | NO                    | YES                                   | YES                                    |
| <b>Purpose &amp; Need Element: Is resilient to the changing shoreline climate and environmental conditions</b> |                 |                     |                       |                                       |  |
| <b>Parameter:</b><br>Mechanical/electrical equipment (raises above 100-year storm elevation)                   | NO              | NO                  | NO                    | YES                                   | YES                                    |
| <b>Parameter:</b><br>Mechanical/electrical equipment (considers projected sea level rise)                      | NO              | NO                  | NO                    | YES                                   | YES                                    |
| <b>Parameter:</b><br>Mechanical/electrical equipment (replaces with newer water-resistant equip.)              | NO              | NO                  | YES                   | YES                                   | YES                                    |
| <b>Purpose &amp; Need Element: Considers the historic character of the bridge</b>                              |                 |                     |                       |                                       |  |
| <b>Parameter:</b><br>Historic character considered consistent with Section 106                                 | YES             | YES                 | YES                   | YES                                   | YES                                    |

# Preferred Alternative – On-Alignment Replacement

---

Why On-Alignment Replacement?

- Improved traffic movement of land and water-based travel
- Enhanced mobility for emergency responders
- Addresses Flooding/Resilience
- Addresses Deficiencies
- Minimizes Property Impacts
- Longest Service Life

# Concerns & Considerations

---

## PAC concerns

- Traffic, noise, air pollution
- Potential truck traffic
- Fire and Emergency Vehicle access
- Relative height/size of the Bridge
- Decorative Bridge Lighting
- Historic aspect

## Considerations

- CTDOT is actively evaluating concerns under EA
- This is not a desirable route due to sharp turns; town has the ability to add signs on town roads
- Preferred alternative height addresses Fire/Emergency Vehicle access
- Our goal is to minimize impact to overall size
- CTDOT is looking into potential lighting resolutions
- Coordination will take place through Section 106 of National Historic Preservation Act with SHPO/historic stakeholders.

## Timeline / Where we are

---

May 2025

- PAC Informational Update

Early Fall 2025

- FHWA Legal Sufficiency Review
- Publish notice of Availability of EA/EIE
- Bridge Marketing Solicitation
- Public Hearing

Early Winter 2025

- Prepare NEPA/CEPA decision documents
- Including responses to public comments

Winter 2025/2026

- NEPA/CEPA decision documents published

*\*Timeline subject to change*

## Section 106 Status & Next Steps

---

- Now that a preferred alternative is identified, FHWA & CTDOT will apply the criteria of adverse effect in accordance with 36CFR800.5(a) and the formal finding will be shared with SHPO, Tribes, and consulting parties.
- FHWA & CTDOT will continue to consult with SHPO, Tribes, and consulting parties to resolve the adverse effect in accordance with 36CFR800.6 and execute a Memorandum of Agreement.
- A follow-up Section 106 Consulting Party meeting will be scheduled to discuss the MOA and mitigation commitments.

**\*Disclaimer: this slide was not presented at PAC meeting; it was part of the 7pm Section 106 discussion and is included here for reference**
