

Electronic Visit Verification (EVV) Fixed Visit Verification (FVV) Device Acknowledgement Form

The Department of Social Services has contracted with Sandata Technologies, LLC, to implement the Electronic Visit Verification project. This project will help to make sure you receive home care services as approved by your doctor or care manager. As part of this project, caregivers must call into an EVV system to make sure that home care services have taken place. Usually these calls would be made from your home phone. However, Sandata has designed a Fixed Visit Verification (FVV) device for clients who do not have phones, or do not allow use of the phone. The FVV device is placed in the client's home to help the caregiver make sure home care services were provided. It is not a listening device and cannot record conversations or activities in your home.

My signature below confirms that I have received a Fixed Visit Verification (FVV) device.

- This device is the property of the Department of Social Services, and is to be used for the purposes of EVV only.
- The device is not to be removed from my home or adjusted in any way.
 - If the device is removed from my home, or tampered with, I agree to notify my caregiver.
