Connecticut Siting Council  
Ten Franklin Square  
New Britain, CT 06051

Re: Petition 1287: 1470 Line – Redding to Wilton  
Petition Amendment

Dear Ms. Bachman:

The Connecticut Light and Power Company doing business as Eversource Energy (Eversource) submitted a Petition on January 26, 2017 to the Connecticut Siting Council (Council) requesting a Declaratory Ruling that no Certificate of Environmental Compatibility and Public Need was required for the proposed modifications to approximately 5 miles of the 115-kilovolt transmission line (1470 Line) in the Towns of Redding, Weston and Wilton, Connecticut (Petition). On March 3, 2017 the Council issued the declaratory ruling requested in the Petition and found that the modifications of the 1470 Line would not have a substantial adverse environmental effect.

After the Council's favorable ruling on the Petition, and prior to the commencement of the line modifications, Eversource determined that based on further field assessments, some additional structures require replacement. Eversource now seeks Council staff approval of the proposed additional changes to the Petition, as described in the attached Amendment.

Eversource has notified representatives of the towns of Redding, Weston and Wilton of the proposed modifications in the Amendment and has provided abutters with written notice of this submission. Eversource submits an original and 15 copies of this request. Should you have any questions regarding this submission, please do not hesitate to contact me at [kathleen.shanley@eversource.com](mailto:kathleen.shanley@eversource.com) or telephone at 860 728-4527.

Sincerely,

Enclosure: Amendment

Cc: Julia Pemberton, First Selectman, Town of Redding

**THE CONNECTICUT LIGHT AND POWER COMPANY  
doing business as  
EVERSOURCE ENERGY**

**AMENDMENT TO PETITION NO. 1287  
PROPOSED MODIFICATIONS TO THE 1470 LINE  
Towns of Redding, Weston and Wilton, Connecticut**

On January 26, 2017, The Connecticut Light and Power Company doing business as Eversource Energy ("Eversource") filed a petition with the Connecticut Siting Council ("Council") requesting a declaratory ruling that a Certificate of Environmental Compatibility and Public Need was not needed for proposed modifications to a 115-kV transmission line in Redding, Weston and Wilton, Connecticut, because the proposed activities would not result in substantial adverse environmental effects (Petition No. 1287, the "Petition"). The proposed modifications to the transmission line (the "1470 Line") to meet reliability criteria generally consisted of replacing eight structures, replacing conductors, replacing shield wire with fiberoptic ground wire ("OPGW") and reinforcing certain structures with weathering steel cross bracing, cross-arms and new guy wires. Specific activities associated with these transmission line modifications included:

- installing sedimentation and erosion controls;
- clearing and removing vegetation;
- improving existing access roads and work pads;
- constructing new access roads and work pads;

- installing temporary construction matting in wetlands and watercourses to avoid permanent impacts;
- constructing work pads for conductor pulling equipment;
- installing new foundations for four replacement structures;
- assembling and erecting eight replacement structures;
- installing reinforcing cross-bracing and cross-arms (on 23 structures) and guy wires and anchors (on 10 structures);
- installing new conductors and OPGW; and
- restoring disturbed areas.

On March 3, 2017, the Council issued its declaratory ruling and found that the proposed modifications to the 1470 Line would not have a substantial adverse environmental effect.

After the Council's favorable ruling on the Petition, and prior to the commencement of construction, Eversource's long-term maintenance and asset condition evaluation process determined that 25 structures, 23 of which were approved for reinforcement under the Petition, were scheduled to be replaced within a two- to three-year horizon. Upon review of the maintenance schedule for the structure replacements, Eversource determined that combining these asset condition replacements with the approved reliability project would provide a superior solution because it would be more cost-effective and would avoid multiple disruptions in the transmission corridor, thereby reducing the cumulative duration of temporary adverse environmental effects and disturbances to neighbors and communities. Accordingly, Eversource is now seeking to modify Petition No. 1287 to include the work needed to replace

24 structures for asset condition purposes and herewith submits this amendment (“Petition Amendment”) for the Council’s review and approval.<sup>1</sup>

#### Proposed Amendments to Approved Scope of Work – Structure Replacements

The approved scope of work with the proposed changes are shown on the revised Redding to Wilton Project Maps included as Attachment A, “Redding to Wilton Project, Redding, Weston and Wilton, Connecticut, dated April 2019”. The proposed changes generally consist of replacing 24 wood H-frame structures with slightly taller, directly-embedded steel H-frame structures or steel 3-pole structures. Replacement structure heights were designed to be as close to the existing structure heights as allowable, however, some increases in structure heights are required to comply with the 2012 National Electric Safety Code (“NESC”) and Eversource’s updated Overhead Transmission Line Standards, which are more stringent than the code requirements that were in effect at the time of the original design and construction of the 1470 Line. The specific changes in the structure types and heights are summarized on Table 1 – “Structure Height Summary”, attached.

As described in Table 1, the replacement structures are generally less than 10 feet taller than the existing structures, though seven structures would be between 10 feet and 27 feet taller than the existing structures, primarily due to location on steep terrain. The increases in structure heights are not anticipated to result in a noticeable change in the existing visual characteristics of the transmission corridor. Changes in the visual effect attributable to the

---

<sup>1</sup> Structure 2959 was planned to be replaced as part of the scope of this amendment, but due to its degraded condition, it was replaced in January 2019 after Eversource informed the Council of the urgent need for the replacement work.

replacement structures will be mitigated by aligning the replacement structures in the same general location as the existing structures and because no additional structures are proposed.

#### Proposed Amendments to Scope of Work – Temporary Wetland Impacts

The structure replacement work will require some of the work pads to be larger and will also require additional pull pads. Specifically, in the original petition the work pads for installation of cross-arms and cross-bracing were approximately 60 feet by 60 feet. The larger pads now needed for the structure replacement work will be roughly 100 feet by 100 feet. However, where possible, the size and configuration of the work pads has been designed to reduce potential impacts to inland wetlands, watercourses and the 100-year floodplain associated with Gilbert Bennet Brook. Work pads in upland areas will remain in place to facilitate future access for transmission line maintenance, unless the underlying property owner requests that they be removed. The temporary wetland impacts associated with the original work described in the Petition (temporary construction mats for access roads and work pads) were estimated to be approximately 42,125 square feet ("sq. ft."), or just under one acre. The work proposed in this amendment would result in a total of approximately 16,780 sq. ft. of additional temporary wetland impacts, with the following incremental increases:

- 6,598 sq. ft. of temporary matting in Wetland 1 and the 100-year floodplain associated with Gilbert Bennet Brook for five work pads and a pull pad (Structures 2937, 2938, 2939, 2940 and 2941);
- 2,236 sq. ft. of temporary matting in Wetland 5 for access to Structures 2948 and 2949;

- 1,947 sq. ft. of temporary matting in Wetland 9 for access to Structure 2953;  
and
- 5,999 sq. ft. of temporary matting in Wetland 25 for a pull pad.

No permanent wetland impacts will occur.

The proposed modifications to the 1470 Line would not substantially change the environmental effects and mitigation measures, and would not alter the construction procedures, work hours, or construction sequencing described in the Petition. Eversource would perform the 1470 Line work in accordance with its *Best Management Practices Manual for Massachusetts and Connecticut (Construction and Maintenance Environmental Requirements)*, September 2016 (2016 BMP Manual), as well as with all applicable regulatory approvals which include the U.S. Army Corps of Engineers (Clean Water Act, Section 404 permit) and the Connecticut Department of Energy and Environmental Protection (Clean Water Act, Section 401 water quality certification and the *General Permit for the Discharge of Stormwater and Dewatering Wastewaters Associated with Construction Activities*), as well as with any additional conditions in a Council approval of this Petition Amendment.

Construction is scheduled to commence in June 2019. Project completion, including restoration, is expected by July 2020.

Prior to submitting this Amendment, Eversource representatives briefed the Towns of Redding, Weston and Wilton officials concerning the Project modifications. At the request of the Towns of Redding and Weston, Eversource representatives attended community meetings to discuss the Project modifications with residents. In addition, Eversource provided abutters with written notice of the filing of the Amendment. As stated in the original Petition,

Eversource representatives will continue proactive outreach to impacted property owners throughout the siting, construction, and restoration of the Project.

Communications regarding this Petition Amendment should be directed to:

Sheet 8 of 10

SHEET 9

Area Description

Adjacent Land Use

- Residential
- Metro-North Railroad- Danbury Branch
- Norwalk River
- Municipal Private Open Space/ Protected Open Space (Wilton Community WYMCA, Inc.)
- Norwalk River Valley Trail: Wilton Loop

Road Crossings

- Pimpewaug Road
- Danbury Road (Route 7)

Right-of-Way Description

Right-of-Way Land Use

- Maintained transmission and railroad corridor
- Metro-North Railroad
- Agricultural land
- 500-year Floodplain

Wetlands, Watercourses, and Waterbodies

- Wetlands – W22, W23, W24
- Wetland Cover Types – PEM, POW
- Watercourse W24 (unnamed intermittent)
- Vernal Pools (VP 22-1) in W22

Wetland and Watercourse Crossings

- W23- Construction mats for access and work pads

Vegetation on Transmission Corridor

- Scrub-shrub
- Lawn

Access

- STR 2986: Climb Structure
- Access to STR 2987, 2988, 2989, 2990, 2991: Off Pimpewaug Road

Maintained Right-of-Way Corridor Width

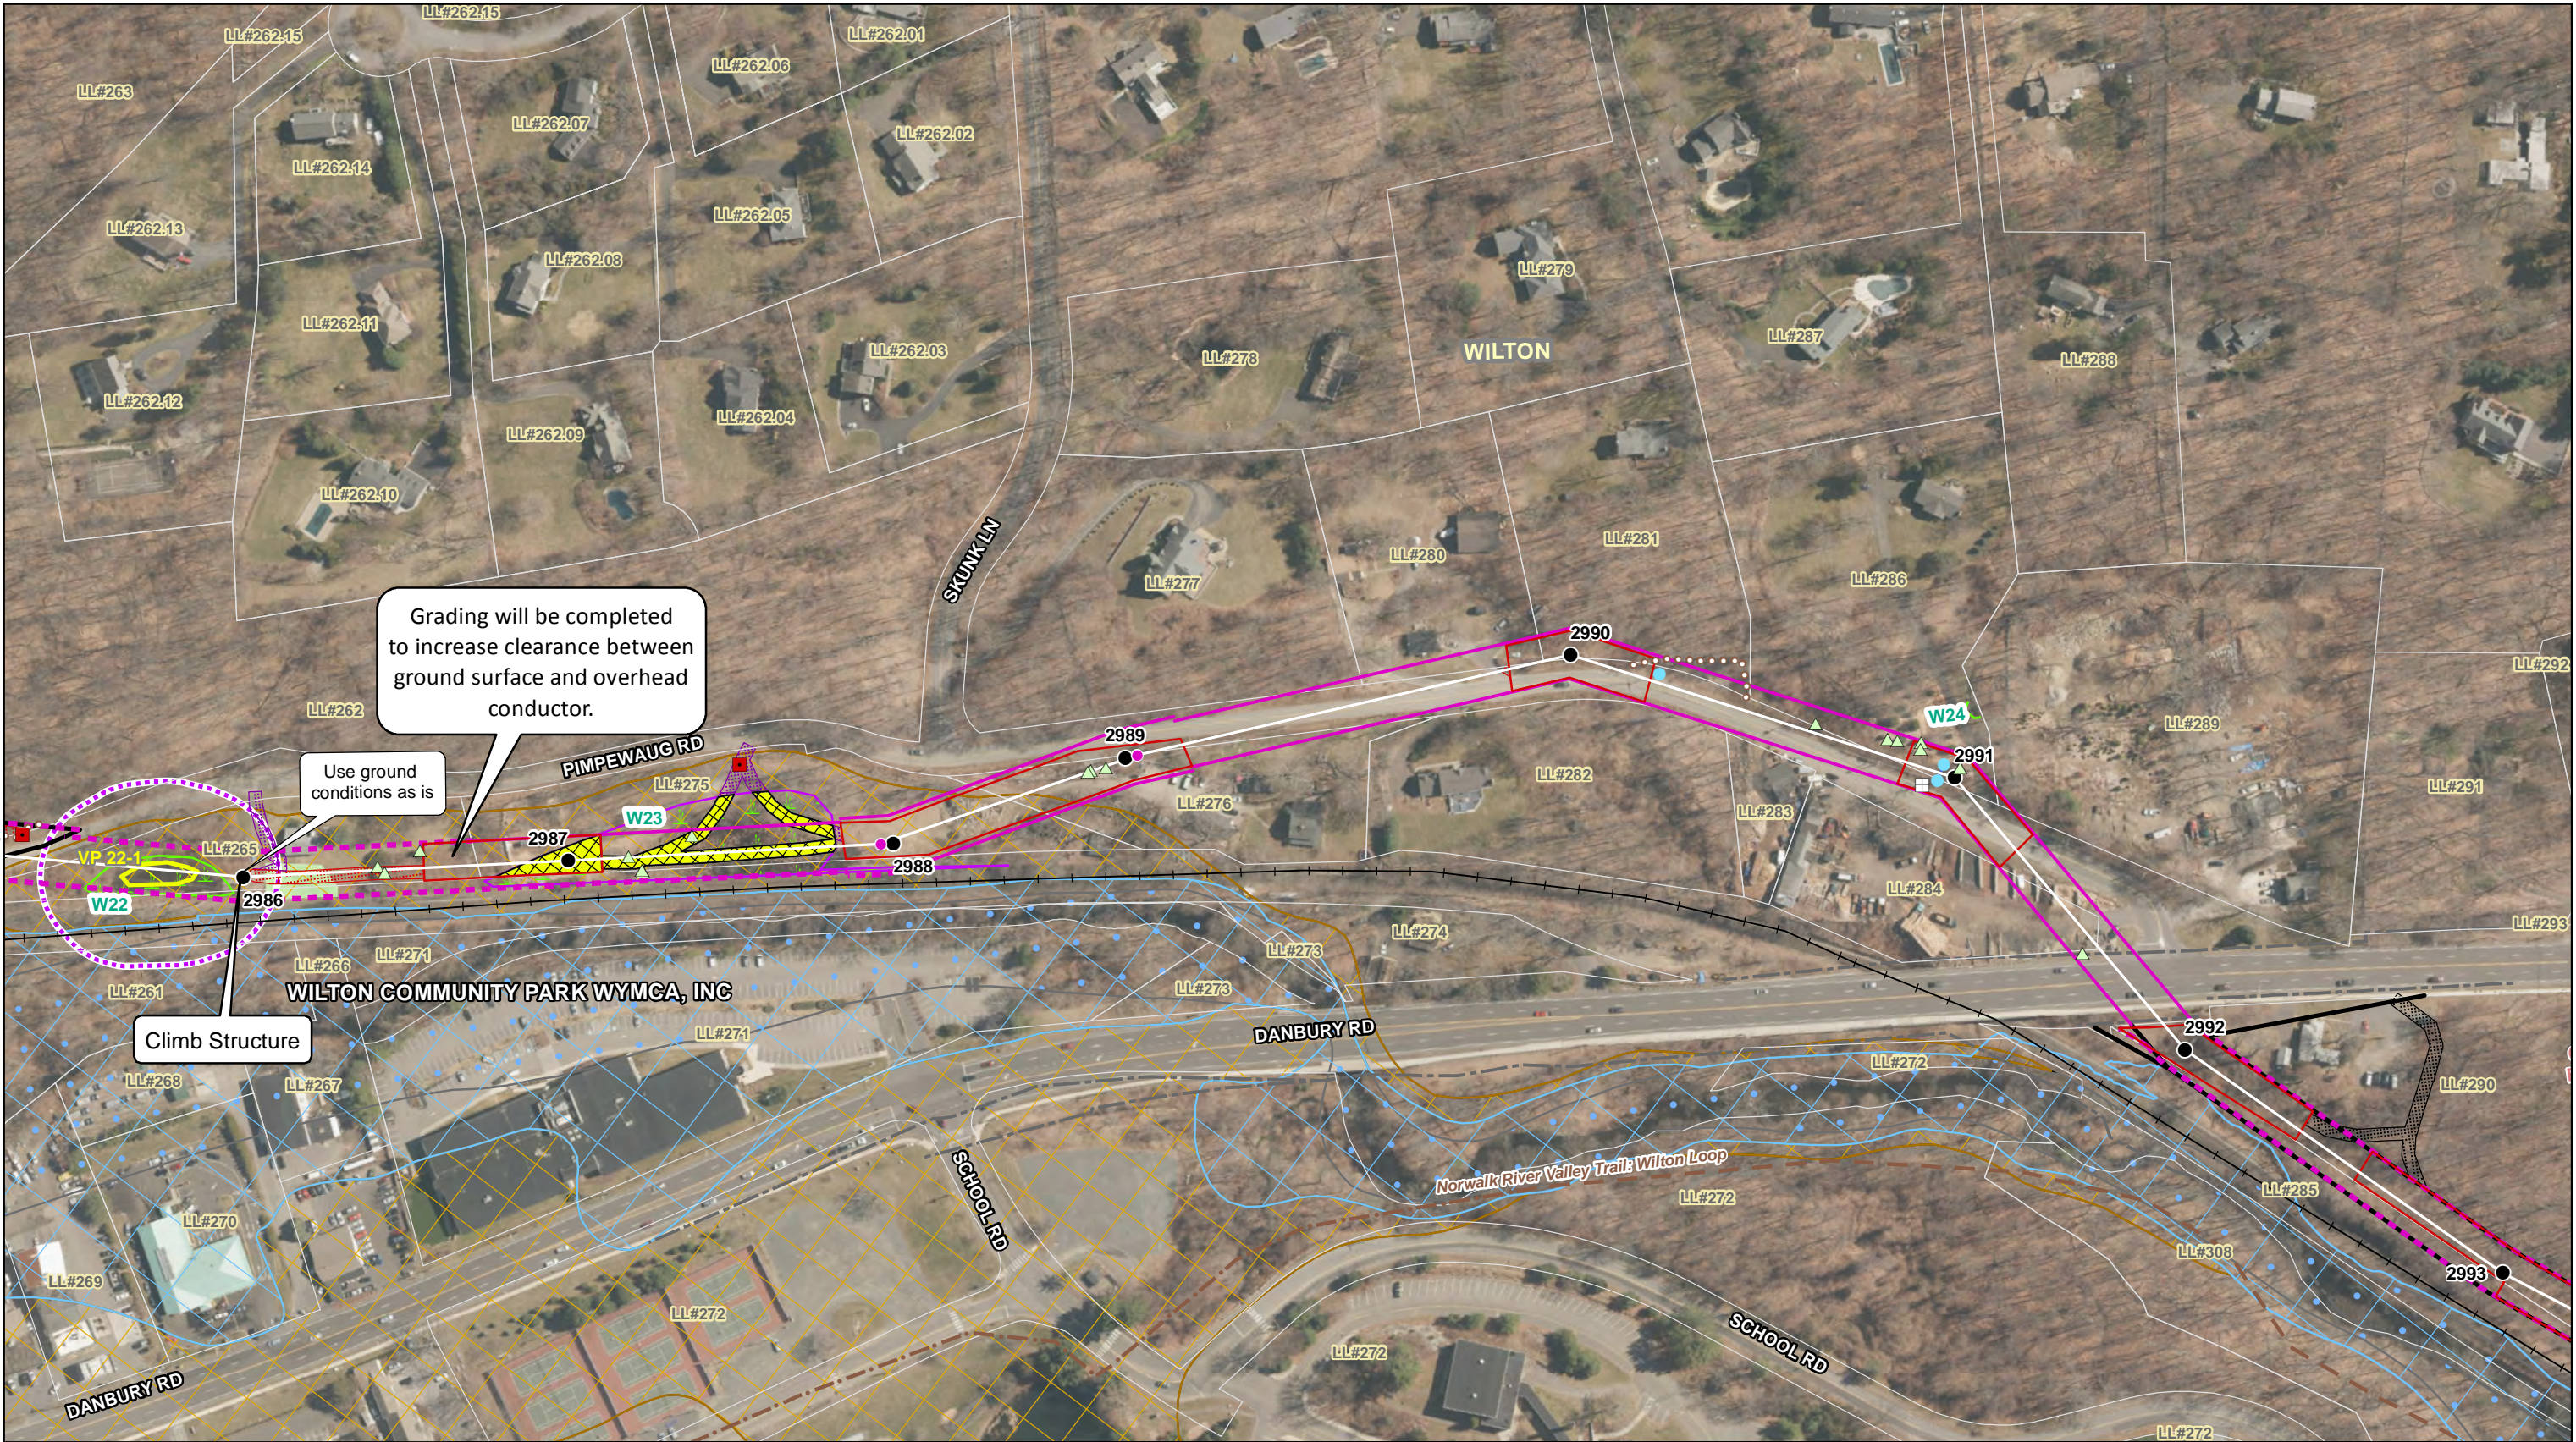

- Between STR 2985 and Wilton Substation: ROW width is ± 60 feet

PSS: Palustrine Shrub-Scrub  
PEM: Palustrine Emergent  
POW: Palustrine Open Water  
PFO: Palustrine Forested

Notes:

1. Based on 2016 Statewide Leaf-Off Orthophotography. Courtesy of CTECO.
2. The information/data provided in this map is for planning purposes only. It is not adequate for legal boundary definition, regulatory interpretation or parcel level analysis. The maps should not be used for construction purposes.
3. Approximate Limit of vegetation management has a 30 ft offset from centerline.
4. Areas between STR 2976 to STR 2981 are within Moderate to High Archaeological Sensitive Area.
5. Wetland 23 delineation based on CT DEEP Inland Wetland Soils
6. Presumed width is 30 feet from the transmission centerline where ROW width is undetermined

Area Description

Adjacent Land Use

- Wilton Substation
- Metro North Railroad- Wilton Station
- Commercial
- Norwalk River
- Municipal Private Open Space/Protected Open Space (Lovers Lane Open Space)
- Municipal Private Open Space/Protected Open Space (Merwin Meadows Park)
- Norwalk River Valley Trail: Wilton Loop

Road Crossings

- Ridgefield Road
- Danbury Road (Route 7)

Right-of-Way Description

Right-of-Way Land Use

- Maintained transmission and railroad corridor
- Commercial

Wetlands, Watercourses, and Waterbodies

- Wetlands – W25
- Wetland Cover Type – PEM

Wetland and Watercourse Crossings

- W25- Construction mats for access road, work pads and pull pads

Vegetation on Transmission Corridor

- Scrub-shrub
- Maintained lawn

Access

- STR 2993 and 2994: Proposed access from private property off Danbury Road
- STR 2993A, 2994A, 2994 and 2995: From Wilton Substation

Maintained Right-of-Way Corridor Width

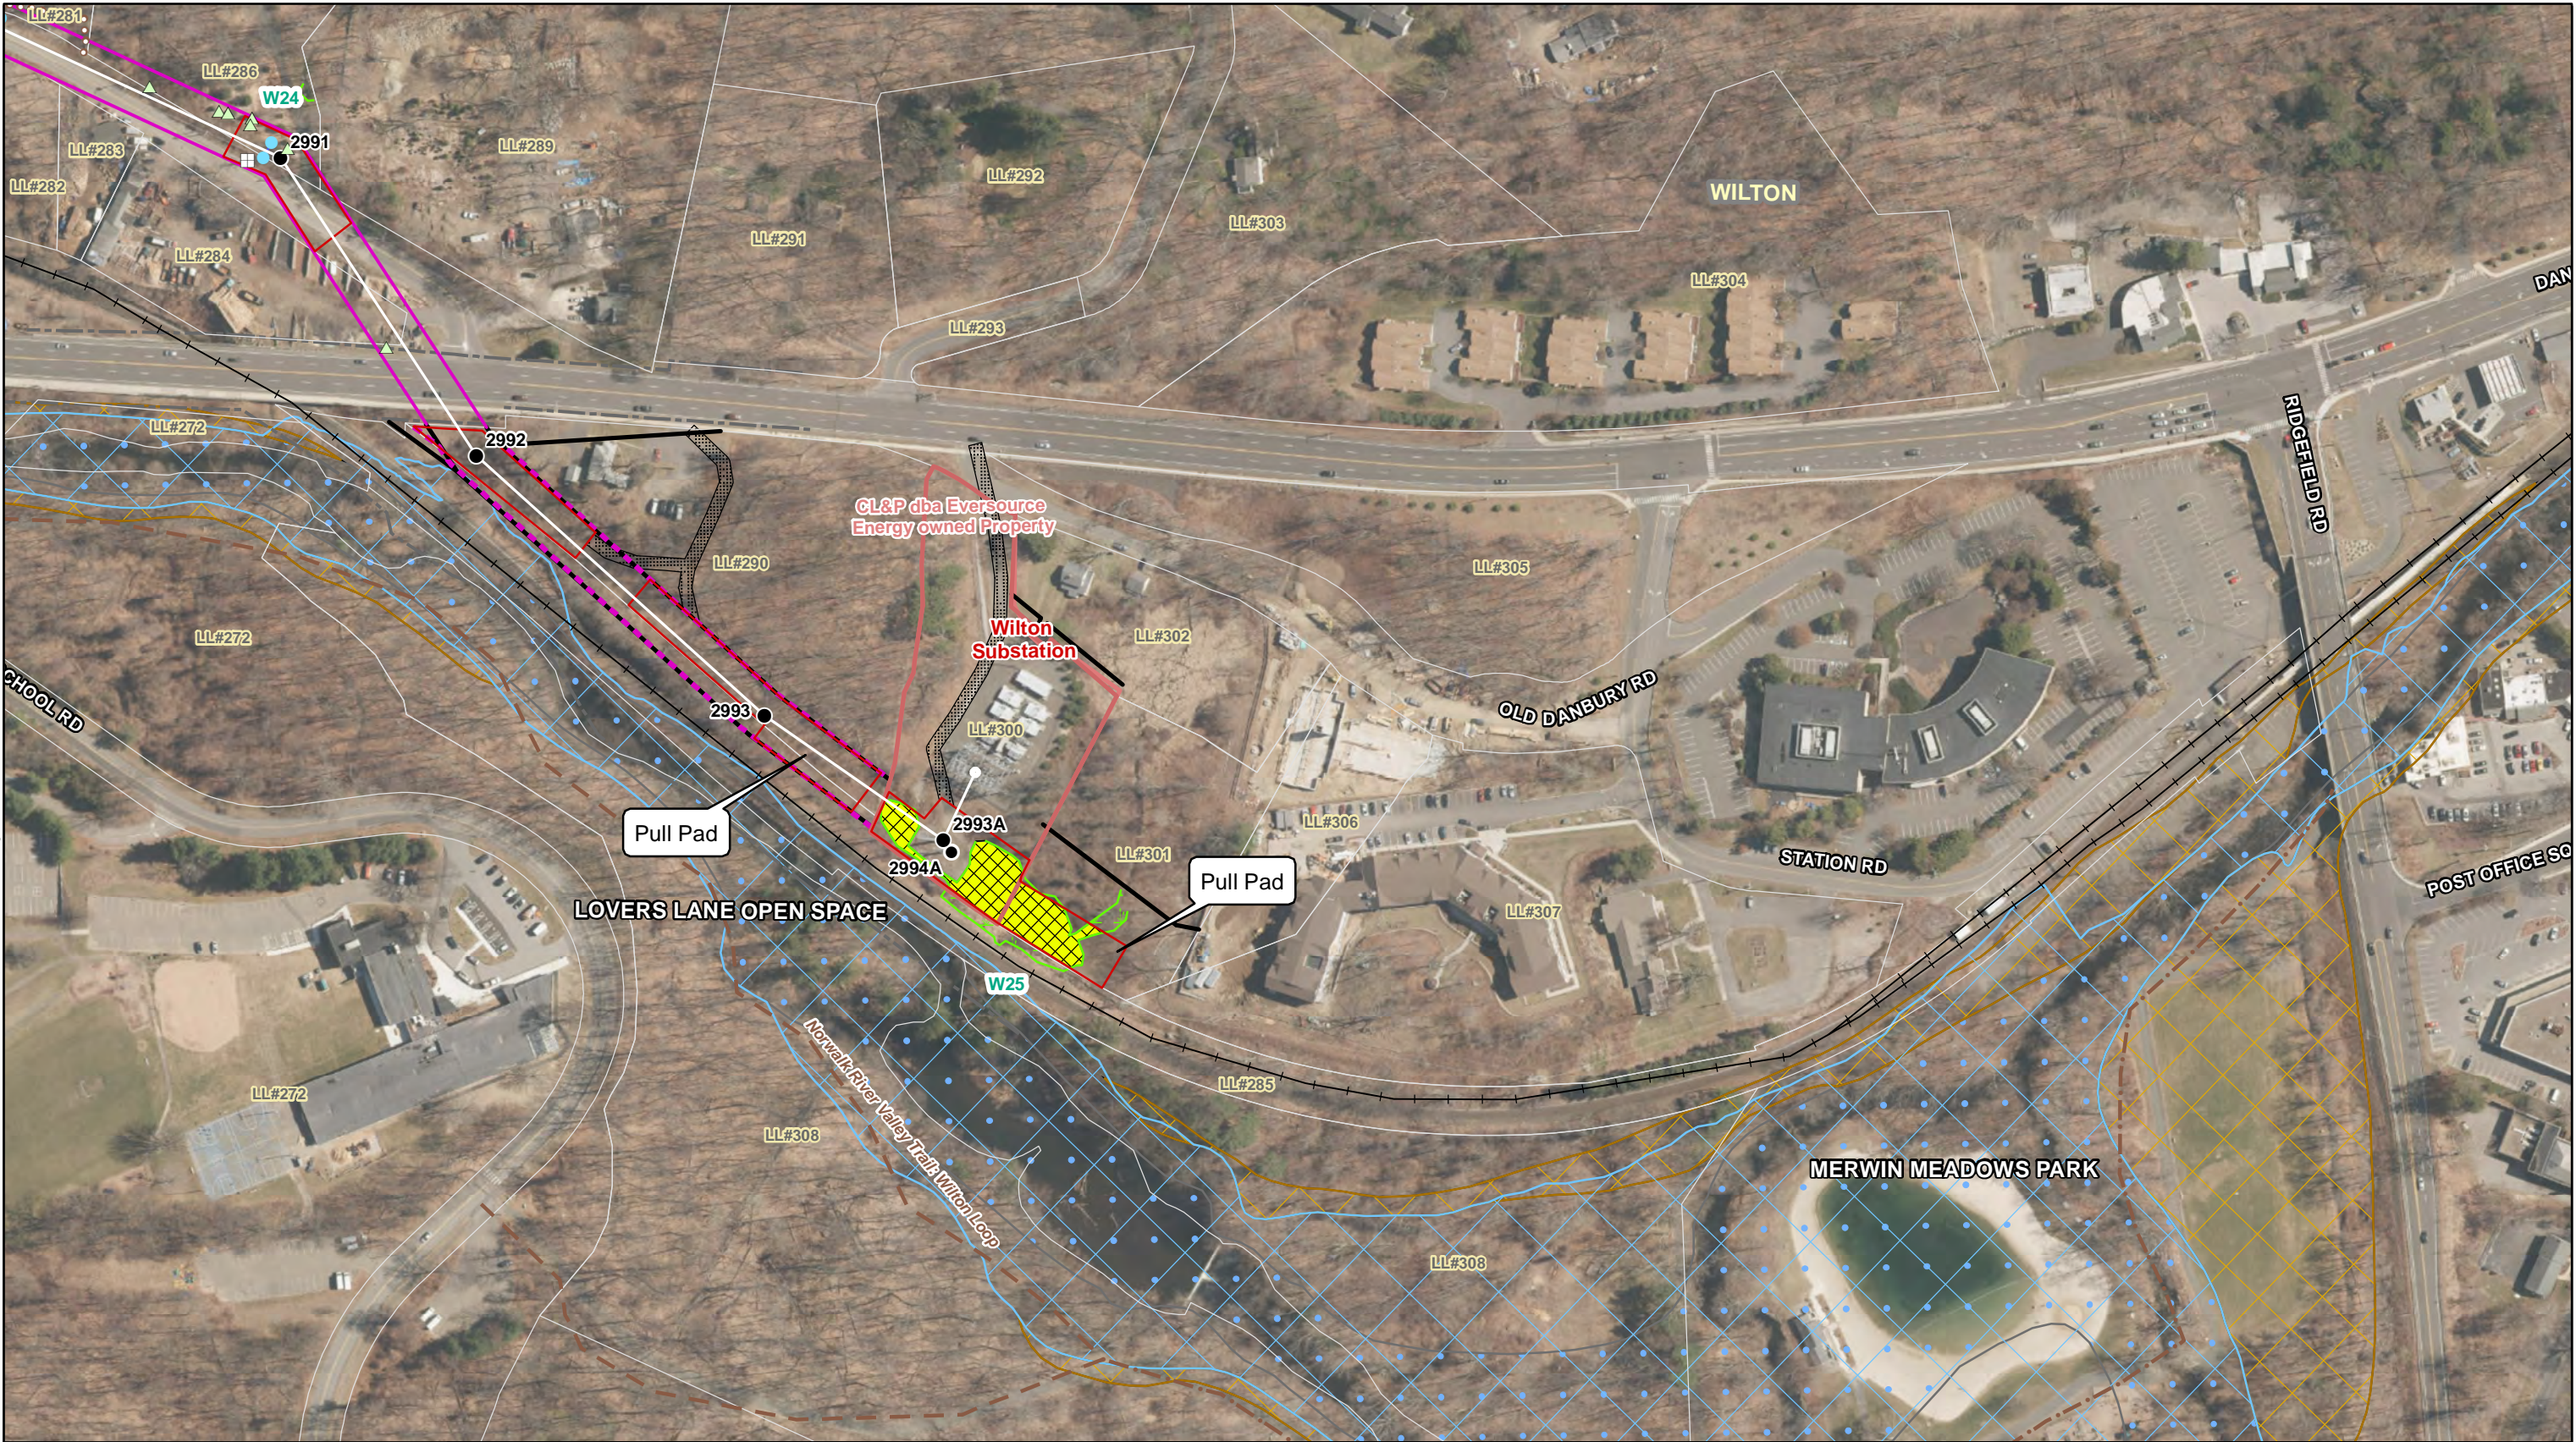

- Between STR 2985 and Wilton Substation: ROW width is ± 60 feet

PSS: Palustrine Shrub-Scrub  
PEM: Palustrine Emergent  
POW: Palustrine Open Water
