RE: Drinking Water Supply Analysis

Dear Residents:

Enclosed is a copy of the laboratory analysis for the raw water sample collected from 10 County Road on April 6<sup>th</sup>, 2011. The water samples were analyzed using EPA test method 504.1 for the presence of 1,2 -Dibromoethane (EDB), 1,2-Dibromo-3-Chloropropone (DBCP), 1,2,3-Trichloropropane (TCP) all of which are agricultural pesticides.

The summary table below includes each compound's respective action level set by the Connecticut Department of Public Health (DPH). If an action level has not established for that particular compound, its detection does not render the water unsafe for drinking or other domestic uses. The summary table also indicates the compound concentrations that were detected. ND indicates None Detected.

COMPOUND	RAW WATER CONCENTRATION MICROGRAMS PER LITER ( $\mu\text{g/L}$ )	DRINKING WATER ACTION LEVEL ( $\mu\text{g/L}$ )
1,2 -Dibromoethane (EDB)	ND	0.05
1,2-Dibromo-3-Chloropropone (DBCP)	ND	None established
1,2,3-Trichloropropane (TCP)	ND	0.05

The raw water collected from the kitchen tap contained 0  $\mu\text{g/L}$  pesticides. Consequently, the water is potable (suitable for human consumption) with respect to these constituents analyzed.

If you have any further questions regarding these results, please do not hesitate to contact me at (860) 424-3796. You may also contact the Connecticut DPH Division of Environmental Epidemiology & Occupational Health at (860) 509-7742 for additional information about the toxicity of specific chemicals found in drinking water.

Sincerely,

MaryAnne Danyluk

Simsbury, CT 06070

Dear Sir or Madam:

The analytical results for the water sample collected at your home on 5-31-96 have been received and recorded at my office. The water was tested for the presence of ethylene dibromide (EDB). A copy of the results is attached.

Please note the following regarding the sample: (Only those comments that are checked apply to your sample.)

- EDB was not detected in your water sample.
- EDB was detected at \_\_\_\_\_ ppb in your water sample. The action level for EDB is 0.05 ppb. The action level is the concentration at or above which the Department of Public Health has determined there could be a health risk to persons using the water for drinking purposes.
- EDB is present in your water at concentrations below the action level. At these levels it is not considered to be a risk to your health.
- We will be sampling your water again in \_\_\_\_\_ months to monitor any changes in water quality.
- This is the first sample for your home in our records that shows EDB present above the action level. We will be resampling at your home in the very near future. If the second sample shows EDB above the action level, you will be notified as to what action should be taken.
- This is the second sample for your home in our records that shows EDB present above the action level. You are therefore eligible for a carbon filter. Within the next month your water will be sampled for several parameters (such as iron) that may affect the operation of the carbon filter. When these results come back, arrangements for the filter installation will be made.

If you have any questions, please contact me at (860) 424-3771.

Sincerely,  
*Naomi Davidson*

Dear Sir or Madam;

The analytical results from the water sample taken at your home on A-04-94 have been received and recorded at my office. Your water was tested for the presence of ethylene dibromide (EDB). A copy of the results is attached.

Please note the following: (Only those comments that are checked apply to your home.)

- EDB was not detected in your water at this time. We will be sampling your well several times over the next 5 years to ensure that EDB does not impact you. If at some time in the future your well does become contaminated with EDB at a concentration greater than the action level, you will be notified as to what action should be taken.
- EDB was detected at 0.5 ppb in your water. The action level for EDB is 0.10 ppb.
- EDB is present in your water at concentrations below the action level. At these levels it is not considered to be a risk to your health. We will be sampling your water again in \_\_\_\_\_ month(s) to ensure that the level of EDB remains low.
- This is the first sample for your home in our records that shows EDB present above the action level. We will be resampling at your home in the very near future. If the second sample shows EDB above the action level, you will be notified as to what action should be taken.
- This is the second sample for your home in our records that shows EDB present above the action level. You are therefore eligible for a carbon filter. Within the next month, your water will be sampled for several parameters (~~such as iron~~) that may affect the operation of the carbon filter. When these results come back, the necessary arrangements for filter installation can be made.

If you have independent analyses of your water for EDB that either confirm or contradict these sample results, it would be very helpful for me to have that information. I would appreciate it if you would send a copy of any independent laboratory results to my attention. If you have any questions, please contact me at 566-3654.

*We will continue to have bottled water delivered until it is determined what action is necessary to provide you with a permanent supply of potable water.*  
enclosure

Dear Sir or Madam:

The analytical results from the water sample taken at your home on June 7 1994 have been received and recorded at my office. Your water was tested for the presence of ethylene dibromide (EDB) and other volatile organic compounds (VOCs). A copy of the results is attached.

Please note the following: (Only those comments that are checked apply to your home.)

- EDB was not detected in your water at this time. We will be sampling your well several times over the next 5 years to ensure that EDB does not impact you. If at some time in the future your well does become contaminated with EDB at a concentration greater than the action level, you will be notified as to what action should be taken.
- EDB was detected at 0.060 ppb in your water. The action level for EDB is 0.10 ppb.
- EDB is present in your water at concentrations below the action level. At these levels it is not considered to be a risk to your health. We will be sampling your water again in 12 month(s) to ensure that the level of EDB remains low.
- 1,2-dichloropropane was not detected in your water supply.
- 1,2-dichloropropane was detected at a concentration of 3.2 ppb in your water. The action level for 1,2-dichloropropane is 5.0 ppb.
- 1,2-dichloropropane is present in your water at a concentration below the action level.
- 1,2-dichloropropane is present in your water at a concentration above the action level. Bottled water will be supplied to your residence for drinking and cooking purposes until arrangements have been made for implementation of a permanent water supply alternative (GAC filter system or public water).

If you have any questions, please contact me at 566-3654.

Sincerely,

*Naomi Davidson*

Aug 1994

Dear Sir or Madam;

The analytical results from the water sample taken at your home on June 7, 1994 have been received and recorded at my office. Your water was tested for the presence of ethylene dibromide (EDB) and other volatile organic compounds (VOCs). A copy of the results is attached.

Please note the following: (Only those comments that are checked apply to your home.)

- EDB was not detected in your water at this time. We will be sampling your well several times over the next 5 years to ensure that EDB does not impact you. If at some time in the future your well does become contaminated with EDB at a concentration greater than the action level, you will be notified as to what action should be taken.
- EDB was detected at < 0.02 ppb in your water. The action level for EDB is 0.10 ppb. (below detection limit)
- EDB is present in your water at concentrations below the action level. At these levels it is not considered to be a risk to your health. We will be sampling your water again in \_\_\_\_\_ month(s) to ensure that the level of EDB remains low.
- 1,2-dichloropropane was not detected in your water supply.
- 1,2-dichloropropane was detected at a concentration of < 0.5 ppb in your water. The action level for 1,2-dichloropropane is 5.0 ppb.
- 1,2-dichloropropane is present in your water at a concentration below the action level.
- 1,2-dichloropropane is present in your water at a concentration above the action level. Bottled water will be supplied to your residence for drinking and cooking purposes until arrangements have been made for implementation of a permanent water supply alternative (GAC filter system or public water).

If you have any questions, please contact me at 566-3654.

Sincerely,

*Naomi Davidson*

Aug 1 1994

Dear Sir or Madam;

The analytical results from the water sample taken at your home on June 7 1993 have been received and recorded at my office. Your water was tested for the presence of ethylene dibromide (EDB) and other volatile organic compounds (VOCs). A copy of the results is attached.

Please note the following: (Only those comments that are checked apply to your home.)

- EDB was not detected in your water at this time. We will be sampling your well several times over the next 5 years to ensure that EDB does not impact you. If at some time in the future your well does become contaminated with EDB at a concentration greater than the action level, you will be notified as to what action should be taken.
- EDB was detected at 0.025 ppb in your water. The action level for EDB is 0.10 ppb.
- EDB is present in your water at concentrations below the action level. At these levels it is not considered to be a risk to your health. We will be sampling your water again in 12 month(s) to ensure that the level of EDB remains low.
- 1,2-dichloropropane was not detected in your water supply.
- 1,2-dichloropropane was detected at a concentration of 6.6 ppb in your water. The action level for 1,2-dichloropropane is 5.0 ppb.
- 1,2-dichloropropane is present in your water at a concentration below the action level.
- 1,2-dichloropropane is present in your water at a concentration above the action level. Bottled water will be supplied to your residence for drinking and cooking purposes until arrangements have been made for implementation of a permanent water supply alternative (GAC filter system or public water).

If you have any questions, please contact me at 566-3654.

Sincerely,

*Naomi Davidson*

STATE OF CONNECTICUT  
DEPARTMENT OF ENVIRONMENTAL PROTECTION

April 28, 2010

Ketchabau Residence  
64 County Road  
Simsbury, CT 06070

Dear Mr. and Mrs. Ketchabu:

Enclosed is a copy of the laboratory analysis for the unfiltered (raw) water sample collected from 64 County Road on 4/15/2010. The water sample was analyzed for the presence of ethylene dibromide (EDB), 1,2,3 -Trichloropropane (TCP), and 1,2 dibromo-3-chloropropane (DBCP).

Results from the analyses are summarized in Table 1 (attached). Table 1 also includes each compound's respective action level set by the Connecticut Department of Public Health (DPH). Please note that only established action levels are included in Table 1. If an action level has not been listed it means that an action level has not been established for that particular compound and its detection does not render the water unsafe for drinking or other domestic uses.

Referring to Table 1, the water sample collected from your water supply did not contain detectable concentrations of pollutants at concentrations at or above their respective action level. An action level is the concentration at or above which the DPH has determined there could be a risk to the health of persons consuming the water. Consequently, your water is considered to be potable.

If you have any questions or comments please contact me at (860) 424-3796.

Sincerely,

MaryAnne Danyluk

Aug 1 1994

Dear Sir or Madam;

The analytical results from the water sample taken at your home on June 7 1994 have been received and recorded at my office. Your water was tested for the presence of ethylene dibromide (EDB) and other volatile organic compounds (VOCs). A copy of the results is attached.

Please note the following: (Only those comments that are checked apply to your home.)

EDB was not detected in your water at this time. We will be sampling your well several times over the next 5 years to ensure that EDB does not impact you. If at some time in the future your well does become contaminated with EDB at a concentration greater than the action level, you will be notified as to what action should be taken.

EDB was detected at \_\_\_\_\_ ppb in your water. The action level for EDB is 0.10 ppb.

EDB is present in your water at concentrations below the action level. At these levels it is not considered to be a risk to your health. We will be sampling your water again in \_\_\_\_\_ month(s) to ensure that the level of EDB remains low.

1,2-dichloropropane was not detected in your water supply.

1,2-dichloropropane was detected at a concentration of \_\_\_\_\_ in your water. The action level for 1,2-dichloropropane is 5.0 ppb.

1,2-dichloropropane is present in your water at a concentration below the action level.

1,2-dichloropropane is present in your water at a concentration above the action level. Bottled water will be supplied to your residence for drinking and cooking purposes until arrangements have been made for implementation of a permanent water supply alternative (GAC filter system or public water).

If you have any questions, please contact me at 566-3654.

Sincerely,

*Naomi Davidson*

Aug 1 1994

Dear Sir or Madam;

The analytical results from the water sample taken at your home on June 7 1994 have been received and recorded at my office. Your water was tested for the presence of ethylene dibromide (EDB) and other volatile organic compounds (VOCs). A copy of the results is attached.

Please note the following: (Only those comments that are checked apply to your home.)

- EDB was not detected in your water at this time. We will be sampling your well several times over the next 5 years to ensure that EDB does not impact you. If at some time in the future your well does become contaminated with EDB at a concentration greater than the action level, you will be notified as to what action should be taken.
- EDB was detected at \_\_\_\_\_ ppb in your water. The action level for EDB is 0.10 ppb.
- EDB is present in your water at concentrations below the action level. At these levels it is not considered to be a risk to your health. We will be sampling your water again in \_\_\_\_\_ month(s) to ensure that the level of EDB remains low.
- 1,2-dichloropropane was not detected in your water supply.
- 1,2-dichloropropane was detected at a concentration of \_\_\_\_\_ in your water. The action level for 1,2-dichloropropane is 5.0 ppb.
- 1,2-dichloropropane is present in your water at a concentration below the action level.
- 1,2-dichloropropane is present in your water at a concentration above the action level. Bottled water will be supplied to your residence for drinking and cooking purposes until arrangements have been made for implementation of a permanent water supply alternative (GAC filter system or public water).

If you have any questions, please contact me at 566-3654.

Sincerely,

*Naomi Davidson*
