RE: Drinking Water Sample Results
1 Centerwood Road, Simsbury

Dear Ms. Winnick:

Please find enclosed a copy of the analytical results for the drinking water samples collected from the above-referenced property. The samples were collected from an outside spigot by a Department of Energy and Environmental Protection (DEEP) representative on March 5th, 2013 and were analyzed for the presence of 1,2-Dibromoethane (EDB), 1,2,3-Trichloropropane (TCP), and 1,2-Dibromo-3-Chloropropane (DBCP) at the Department of Public Health (DPH) Laboratory using EPA test method 504.1 for agricultural pesticides.

In the water samples that were collected, the following compounds were detected at the levels indicated below:

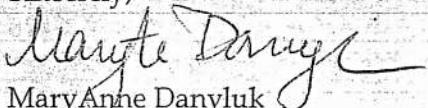

COMPOUND	RAW WATER CONCENTRATION MICROGRAMS PER LITER (μ g / L)	DRINKING WATER ACTION LEVEL (μ g / L)
1,2-Dibromoethane (EDB)	<0.020	0.05
1,2,3-Trichloropropane (TCP)	<0.040	0.05
1,2-Dibromo-3-Chloropropane (DBCP)	<0.020	None established

A Drinking Water Action Level (DWAL) is the concentration of a substance at or above which the Commissioner of the Connecticut DPH has determined there could be a risk to the health of persons consuming the water. A reported concentration of "ND" indicates that the compound was not detected in the sample. A concentration with a "<" (less than) designation signifies that there may be a trace amount of this compound in your well that is below the laboratory detection limit.

The reported concentrations of EDB and TCP do not exceed the DWALs in the raw water. Based on these results, your drinking water supply is potable with respect to those constituents tested. The results are attached.

If you have any further questions regarding these results, you may contact me at (860) 424-3796. You may also contact the Connecticut DPH Division of Environmental Epidemiology & Occupational Health at (860) 509-7742 for additional information about the toxicity of specific chemicals found in drinking water.

Sincerely,

MaryAnne Danyluk

RE: Drinking Water Sampling
7 Centerwood Road, Simsbury

Dear Mr. Papalli:

By way of this letter, the Remediation Division of the Bureau of Water Protection and Land Reuse of the Department of Energy and Environmental Protection (DEEP) is contacting you directly to recommend that you make arrangements with our field technician, Ted Brightwell, to grant access to sample the drinking water supply well at the above referenced address for the chemical compounds, Ethylene Dibromide (EDB) and 1, 2, 3- Trichloropropane (TCP). As you are probably aware, both of those chemical compounds were used as pesticides on tobacco fields in your area and were subsequently found to have polluted ground water from which your domestic supply is derived.

Please make arrangements for our field technician, Ted Brightwell, who can be reached at (860) 424-3293 or at Theodore.brightwell@ct.gov to collect and submit the water samples for analyses by the State Department of Public Health's laboratory in order to make sure the your drinking water supply is safe for drinking in terms of the above mentioned chemical compounds. There is no fee associated with the well water analyses.

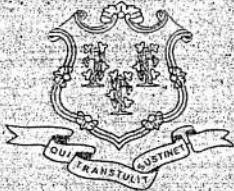

You may also contact the Connecticut DPH Division of Environmental Epidemiology & Occupational Health at (860) 509-7742 for additional information about the toxicity of specific chemical(s) found in drinking water.

If you choose not to grant access to DEEP staff to collect raw water samples or have any questions regarding this letter, please contact me at (860) 424-3796 or at maryanne.danyluk@ct.gov on or within 15 days of the date of this letter.

Sincerely,

A handwritten signature in black ink that reads "MaryAnne Danyluk".

May 14, 2009

Papalli Residence
7 Centerwood Road
Simsbury, CT 06070

Dear Mr. and Mrs. Papalli:

Enclosed is a copy of the laboratory analysis for the unfiltered (raw) water sample collected from 7 Centerwood Road on 4/27/2009. The water sample was analyzed for the presence of ethylene dibromide (EDB), 1,2,3-trichloropropane (TCP), and 1,2 dibromo-3-chloropropane (DBCP).

Results from the analyses are summarized in Table 1 (attached). Table 1 also includes each compound's respective action level set by the Connecticut Department of Public Health (DPH). Please note that only established action levels are included in Table 1. If an action level has not been listed it means that an action level has not been established for that particular compound and its detection does not render the water unsafe for drinking or other domestic uses.

Referring to Table 1, the water sample collected from your water supply did not contain detectable concentrations of pollutants at concentrations at or above their respective action level. An action level is the concentration at or above which the DPH has determined there could be a risk to the health of persons consuming the water. Consequently, your water is considered to be potable.

Sincerely,

MaryAnne Danyluk

RE: Drinking Water Sample Results
15 Centerwood Road, Simsbury

Dear Resident:

Please find the enclosed copy of the analytical results for the drinking water samples collected from the above-referenced property. The samples were collected from an outside spigot by a Department of Energy and Environmental Protection (DEEP) representative on 8/23/2011 ~~and~~ were analyzed for the presence of 1,2-Dibromoethane (EDB), 1,2,3-Trichloropropane (TCP), and 1,2-Dibromo-3-Chloropropane (DBCP) at the Department of Public Health (DPH) Laboratory using EPA test method 504.1 for agricultural pesticides.

In the water samples that were collected, the following compounds at the levels indicated below.

COMPOUND	RAW WATER CONCENTRATION MICROGRAMS PER LITER (μ g/L)	DRINKING WATER ACTION LEVEL (μ g/L)
1,2-Dibromoethane (EDB)	<0.020	0.05
1,2,3-Trichloropropane (TCP)	<0.040	0.05
1,2-Dibromo-3-Chloropropane (DBCP)	<0.020	None established

A Drinking Water Action Level (DWAL) is the concentration of a substance at or above which the Commissioner of the Connecticut DPH has determined there could be a risk to the health of persons consuming the water. A reported concentration of "ND" indicates that the compound was not detected in the sample. A concentration with a "<" (less than) designation signifies that there may be a trace amount of this compound in your well that is below the laboratory detection limit.

Oligive Residence
15 Centerwood Road, Simsbury, CT

October 13, 2011

The reported concentrations of compounds do not exceed the DWAL. Based on these results, your water supply is potable with respect to those constituents tested. The results are attached.

If you have any further questions regarding these results, you may contact me at (860) 424-3796. You may also contact the Connecticut DPH Division of Environmental Epidemiology & Occupational Health at (860) 509-7742 for additional information about the toxicity of specific chemicals found in drinking water.

Sincerely,

MaryAnne Danyluk

April 23, 2010

Yoczik Residence
18 Centerwood Drive
Simsbury, CT 06070

Dear Mr. and Mrs. Yoczik:

Enclosed is a copy of the laboratory analysis for the unfiltered (raw) water sample collected from 18 Centerwood Drive on 3/24/2010. The water sample was analyzed for the presence of ethylene dibromide (EDB), 1,2,3-trichloropropane (TCP), and 1,2 dibromo-3-chloropropane (DBCP).

Results from the analyses are summarized in Table 1 (attached). Table 1 also includes each compound's respective action level set by the Connecticut Department of Public Health (DPH). Please note that only established action levels are included in Table 1. If an action level has not been listed it means that an action level has not been established for that particular compound and its detection does not render the water unsafe for drinking or other domestic uses.

Referring to Table 1, the water sample collected from your water supply did not contain detectable concentrations of pollutants at concentrations at or above their respective action level. An action level is the concentration at or above which the DPH has determined there could be a risk to the health of persons consuming the water. Consequently, your water is considered to be potable.

If you have any questions or comments please contact me at (860) 424-3796.

Sincerely,

MaryAnne Danyluk

October 4, 2007

Rodrigues Residence
20 Centerwood Road
Simsbury, CT 06070

Dear Mr. or Ms. Rodrigues:

Enclosed is a copy of the laboratory analysis for the unfiltered (raw) water sample collected from 20 Centerwood Road on 9/7/2007. The water sample was analyzed for the presence of ethylene dibromide (EDB), 1,2,3-trichloropropane (TCP), and 1,2 dibromo-3-chloropropane (DBCP).

Results from the analyses are summarized in Table 1 (attached). Table 1 also includes each compound's respective action level set by the Connecticut Department of Public Health (DPH). Please note that only established action levels are included in Table 1. If an action level has not been listed it means that an action level has not been established for that particular compound and its detection does not render the water unsafe for drinking or other domestic uses.

Referring to Table 1, the sample collected from your unfiltered water supply did not contain compounds at concentrations above any established action level. An action level is the concentration at or above which the DPH has determined there could be a risk to the health of persons consuming the water. Consequently, your water is potable with respect to those parameters analyzed and is suitable for drinking and other domestic uses.

If you have any questions or comments please contact me at (860) 424-3796.

Sincerely,

MaryAnne Danyluk

April 23, 2010

Audet Residence
24 Centerwood Drive
Simsbury, CT 06070

Dear Mrs. Audet:

Enclosed is a copy of the laboratory analysis for the unfiltered (raw) water sample collected from 24 Centerwood Drive on 3/24/2010. The water sample was analyzed for the presence of ethylene dibromide (EDB), 1,2,3-trichloropropane (TCP), and 1,2 dibromo-3-chloropropane (DBCP).

Results from the analyses are summarized in Table 1 (attached). Table 1 also includes each compound's respective action level set by the Connecticut Department of Public Health (DPH). Please note that only established action levels are included in Table 1. If an action level has not been listed it means that an action level has not been established for that particular compound and its detection does not render the water unsafe for drinking or other domestic uses.

Referring to Table 1, the water sample collected from your water supply did not contain detectable concentrations of pollutants at concentrations at or above their respective action level. An action level is the concentration at or above which the DPH has determined there could be a risk to the health of persons consuming the water. Consequently, your water is considered to be potable.

If you have any questions or comments please contact me at (860) 424-3796.

Sincerely,

MaryAnne Danyluk

TABLE ONE
Raw Water Sample Results
24 Centerwood Drive
Simsbury, Connecticut

COMPOUND ANALYZED	CONCENTRATION DETECTED ug/l	ACTION LEVEL ug/l
1,2 dibromoethane (EDB)	ND	0.05
1,2,3-trichloropropane (TCP)	ND	0.05
1,2 dibromo-3-chloropropane (DBCP)	ND	NAL

Notes: ug/l Microgram per liter
ND Not detected above analytical detection limits
NAL An action level has not been established by the Department of Public Health (DPH)
