# How to Create a Video Component (Content Editor) Part 1.

## Introduction

The Video Component features an embedded video from a streaming source such as YouTube or Vimeo. The video source must be configured to allow for public access and accessibility considerations such as captioning. For this example, we will be creating Video Components for a 4x4x4 Sub layout.

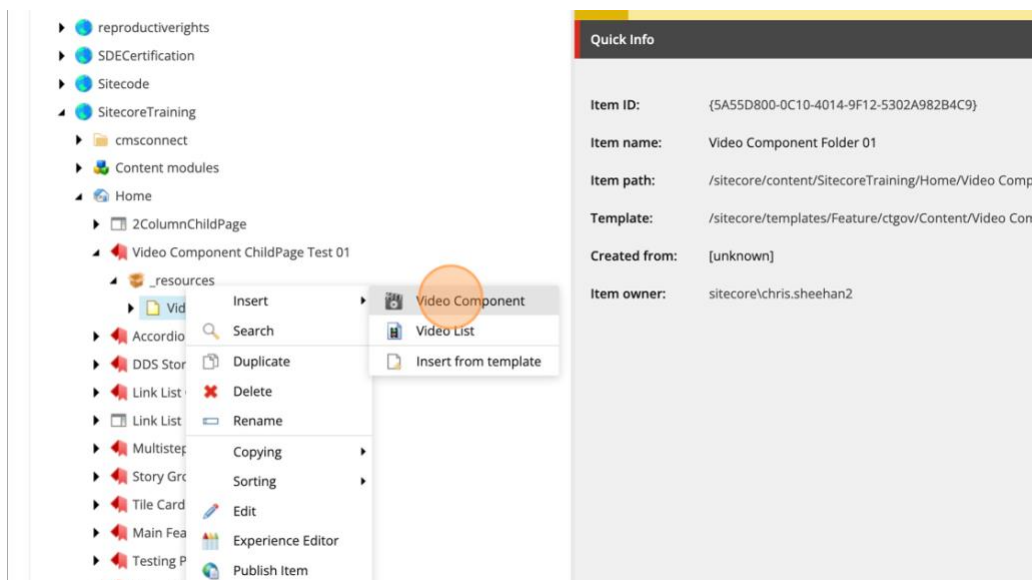

## Step 1

Locate the "\_resources" box and right click it. Click "Insert". Then click "Video Component Folder".

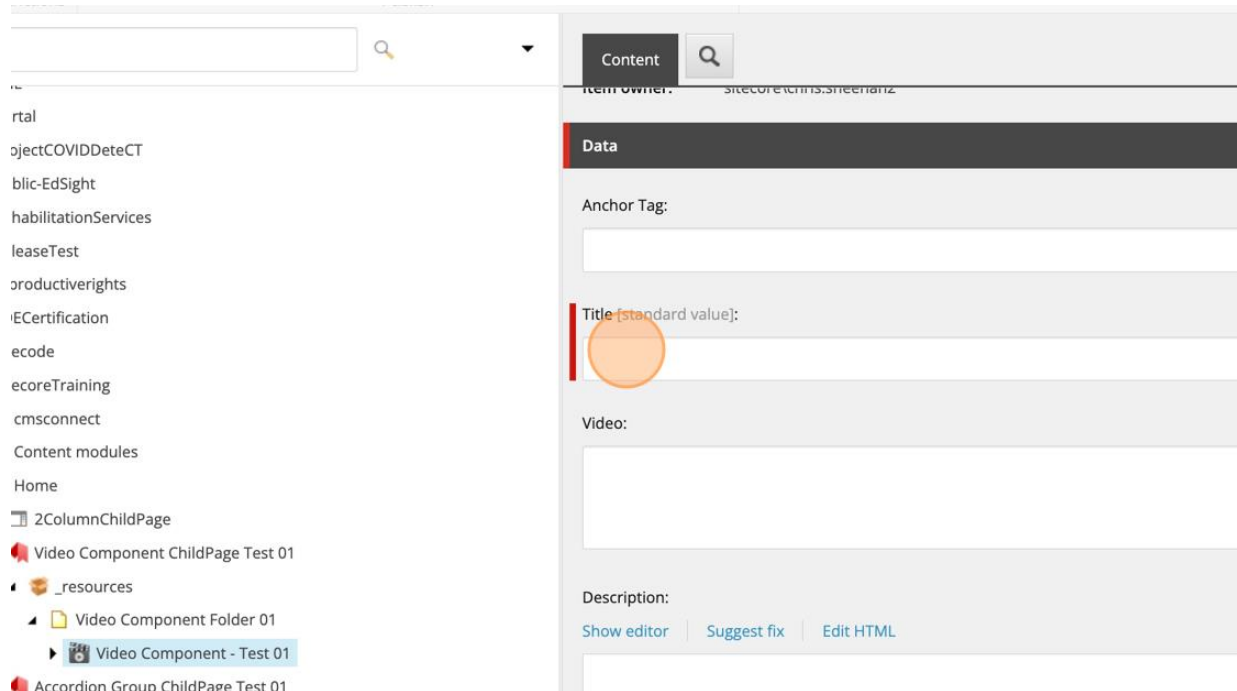

## Step 2

Right-click the Video Component Folder, click "Insert" and click "Video Component". In the pop-up that appears, give the Video Component a unique name and click "OK".

## Step 4

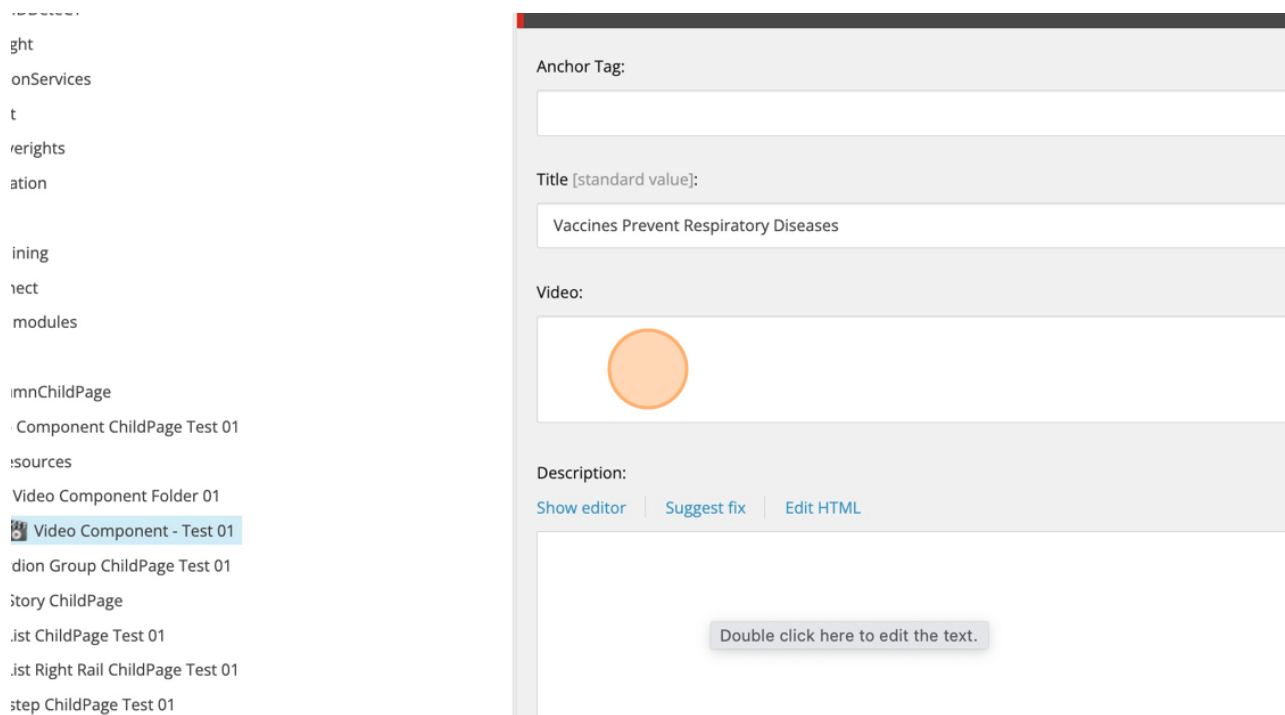

Click on the "Video Component", and in the right panel, fill in the details. First, fill in the Video Title.

The screenshot shows a content management system interface. On the left is a sidebar with a tree view containing various content items. The 'Video Component - Test 01' item is selected and highlighted in blue. The right-hand panel is titled 'Content' and shows the details for the selected item. The 'Data' section is expanded, showing fields for 'Anchor Tag', 'Title [standard value]', and 'Video'. The 'Title' field is currently empty and has an orange circle highlighting it. Below the 'Video' field is a 'Description' field with links for 'Show editor', 'Suggest fix', and 'Edit HTML'.

## Step 5

Next, go to the "Video" section and click inside the field. Determine where you are using the video resource from. If you are using videos from publishing sites like YouTube or Vimeo, insert the embed code that those sites provide in their "Share" option.

The screenshot shows the same content management system interface as in Step 4. The 'Video' field in the right-hand panel is now active, and a text box is visible with the text 'Double click here to edit the text.' The 'Title' field is now filled with the text 'Vaccines Prevent Respiratory Diseases'. The 'Anchor Tag' field is empty. The 'Description' field is also empty, with links for 'Show editor', 'Suggest fix', and 'Edit HTML'.

## Step 6

Next, click in the "Display Styles" field and make sure that "Version 2" is selected.

The screenshot shows the Sitecore Content Editor interface for editing a video component. The main content area is titled "Vaccines Prevent Respiratory Diseases". Under the "Video:" label, there is a text field containing an HTML embed code: `<iframe width="560" height="315" src="https://www.youtube.com/embed/9BK29g6LUMg" title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-write; web-share" allowfullscreen></iframe>`. Below this is a "Description:" field with links for "Show editor", "Suggest fix", and "Edit HTML". The "Display Styles [standard value]:" section shows "Version 2" selected in a dropdown menu, which is highlighted with an orange circle. There is also an unchecked checkbox for "ShadowBorder". A "workflow data" section is visible below. At the bottom, the "Author Name:" field contains the text "chris.sheehan2". On the left side, a navigation pane shows a tree structure with "Page - Test 01" selected.

## Step 7

The Video Component is now complete. Immediately click on the "Save" button in the top left corner of the Sitecore Content Editor to SAVE YOUR WORK. Next, go to the "Publish" tab. Click on "Publish Content".

The screenshot shows the Sitecore Content Editor interface in a browser window. The address bar shows the URL: `authoring-stage.ct.egov.com/sitecore/shell/Applications/Content%20Editor.aspx?sc_bw=1&sc_lang=en`. The top navigation bar includes tabs for HOME, NAVIGATE, PUBLISH, REVIEW, ANALYZE, VERSIONS, CONFIGURE, PRESENTATION, SECURITY, and VIEW. Below this is a secondary navigation bar with icons for Save, Items last updated, Content broken link, Orphan File, and Article Feedback. The "Save" button is highlighted with an orange circle. Below the navigation bar is a search bar and a left-hand navigation pane showing a tree structure with "Link List ChildPage Test 01" selected. On the right side, there is a "Content" panel with a search icon, and a "Data" section with fields for "Item owner:" (sitecore\chris.sheehan2), "Anchor Tag:" (empty), and "List Title:" (empty).

## Step 8

Now that you have created your first Video Component, you can now proceed to create the other 2 needed for this 4x4x4 Sub layout example, just follow steps 2-7 of this lesson.

Keep in mind, there is an important factor to consider when creating and using this component, Video Components are meant to spread evenly across blades on a page, this means when using this component, the sub layout options that are given are 3x3x3x3 (4 videos across). 4x4x4 (3 videos across) and 6x6 (2 videos across).

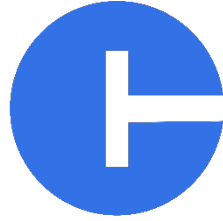

The image shows a screenshot of a content management system interface. On the left is a file tree with the following structure:

- ▶ RehabilitationServices
- ▶ ReleaseTest
- ▶ reproductiverights
- ▶ SDECertification
- ▶ Sitecode
- ▶ SitecoreTraining
  - ▶ cmsconnect
  - ▶ Content modules
  - ▶ Home
    - ▶ 2ColumnChildPage
    - ▶ Video Component ChildPage Test 01
      - ▶ \_resources
        - ▶ Video Component Folder 01
          - ▶ Video Component - Test 01
          - ▶ Video Component - Test 02
          - ▶ Video Component - Test 03
    - ▶ Accordion Group ChildPage Test 01
    - ▶ DDS Story ChildPage
    - ▶ Link List ChildPage Test 01
    - ▶ Link List Right Rail ChildPage Test 01
    - ▶ Multitap ChildPage Test 01

The 'Video Component - Test 03' item is highlighted with a blue selection bar. An orange circle highlights the 'Video Component ChildPage Test 01' folder.

On the right is the component editor for 'Video Component - Test 03'. It has the following fields:

- Title:** Vaccination Help Prevent Influenza
- Video:** `<iframe width="1440" height="544" src="https://www.youtube.com/embed/gyroscope; picture-in-picture; web-share" allowfullscreen></iframe>`
- Description:** [Show editor](#) | [Suggest fix](#) | [Edit HTML](#)
- Display Styles [standard value]:** Version 2

# How to Create Feature Content Cards (Experience Editor) Part 2.

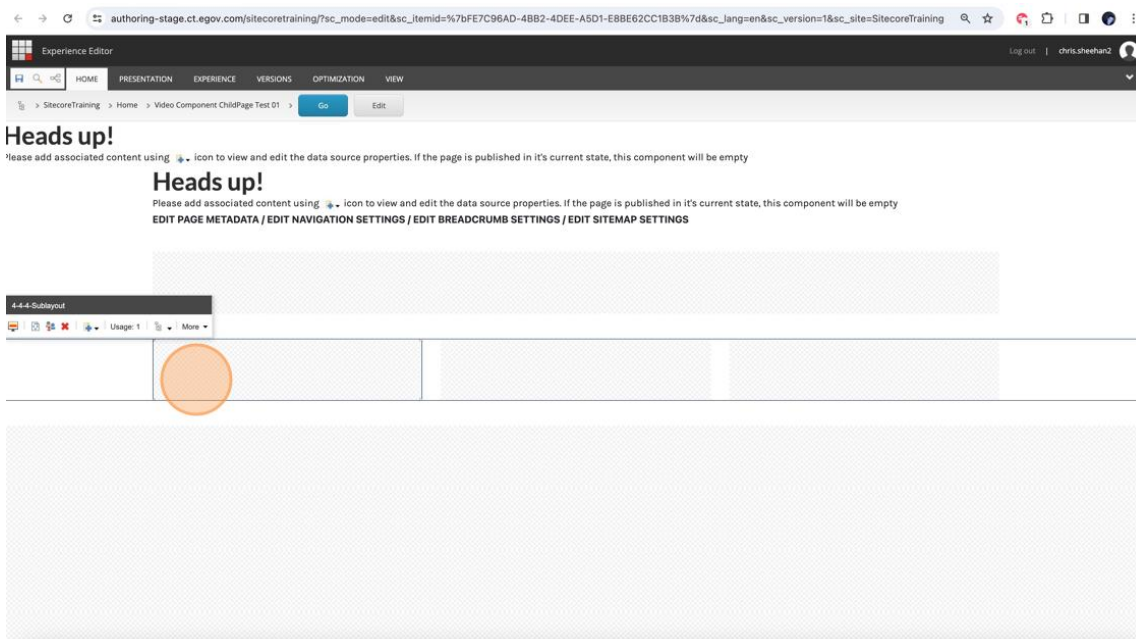

## Step 1

Click the page you are working on in the Content Editor and inside the “Publish” tab to open the “Experience Editor”. Once the new browser tab has opened, wait for the Experience Editor page to load.

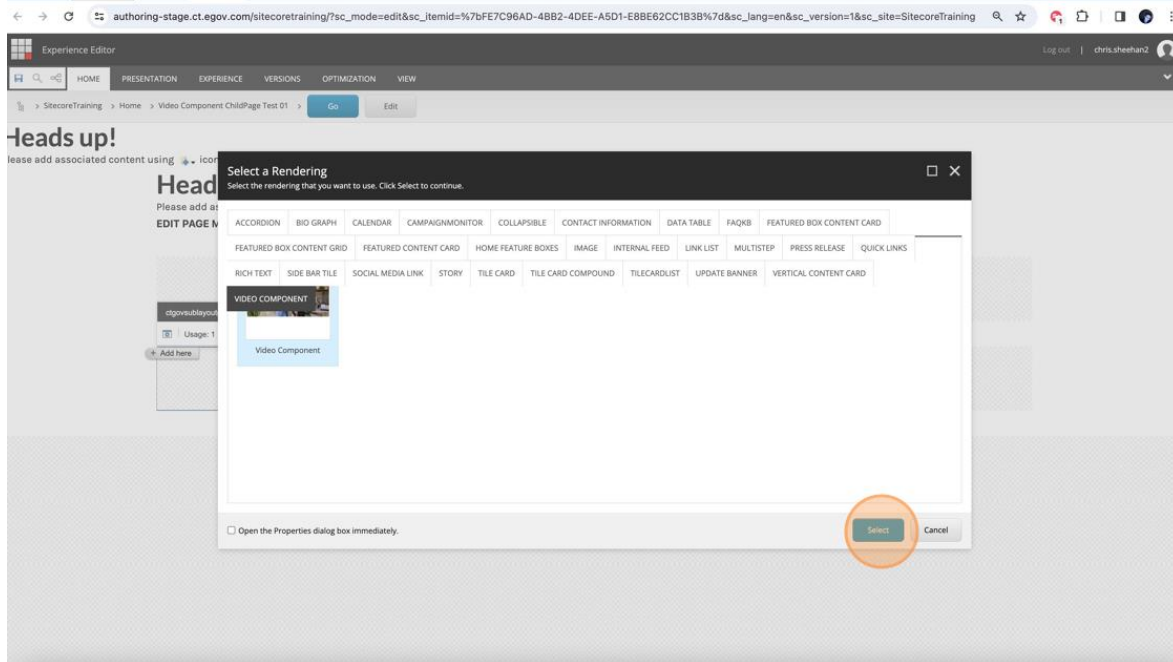

## Step 2

Click in the empty box and select "4x4x4 Sub-layout" in the pop-up that appears and click "Select". Click "Add here". Select on the “4x4x4 Sub layout” option for this example. As you will see, the blade container has now divided into 3 equal rectangles across the page.

### Step 3

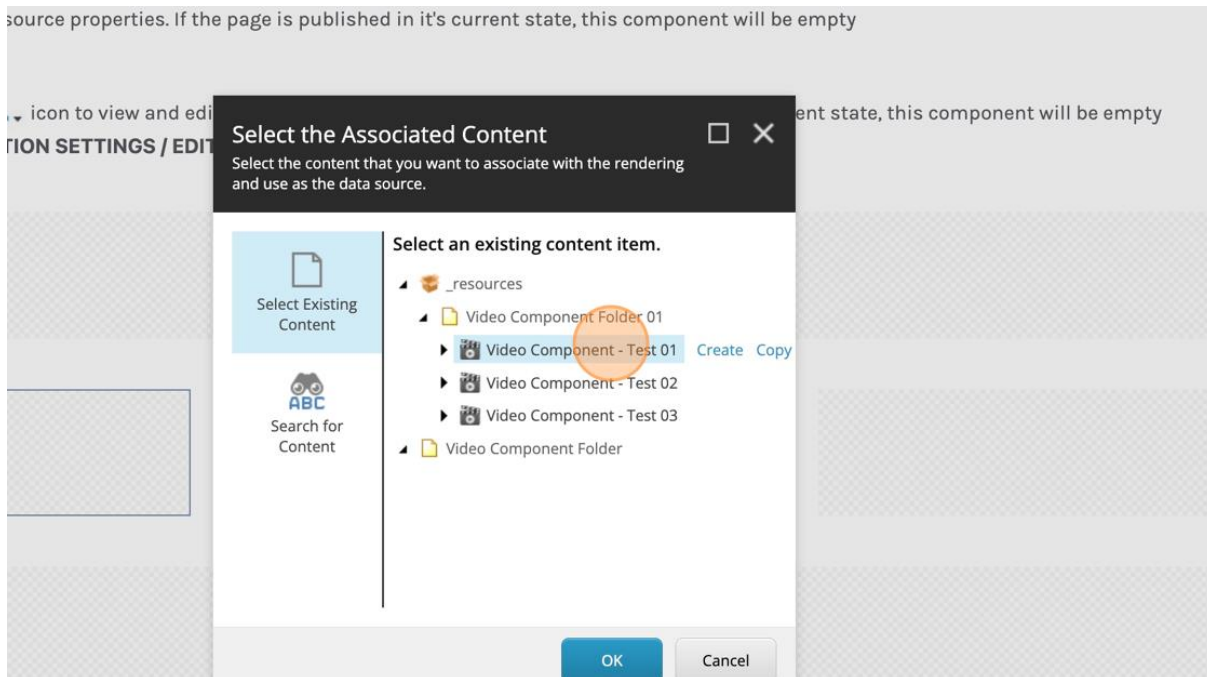

Click inside the first container placeholder, click "Add here". Select "Video Component" in the pop-up. Click on the "VIDEO COMPONENT" image. Click "Select".

### Step 4

In this new pop-up, expand the "Video Component Folder" you previously created in the Content Editor. Click the first "Video Component". Your Video Component should be visible and resemble the example shown below. Select the first Video component and click "OK".

source properties. If the page is published in it's current state, this component will be empty

## Step 5

Once the first component has completed loading into the first space, please follow Steps 2-4 of this lesson to load the second and third video components.

Home > Video Component ChildPage Test 01 > [Go](#) [Edit](#)

### Heads up!

Please add associated content using  icon to view and edit the data source properties. If the page is published in it's current state, this component will be empty
